Author Index to Volume 61

L indicates Letters to the Editor, E indicates Errata, N indicates Necrology, R indicates book review, and TN indicates Technical Note. Book reviews are listed under the name of the author of the review, not the author of the book. Authors of books are indicated in the list under Book Reviews in the Subject Index. There are no references to "see someone else" in the Author Index. Although it has meant a little duplication, all articles in which he was author or co-author have been included under each author. In the entry for each junior author, has name is followed by "with (senior author) and (other joint author)." Many titles have been shortened, to save space.

If the paper covered by a meeting abstract was published in the same year as the abstract, the two references have been separated by a solidus (/), i.e., 733A/1410 indicates that the paper described in an abstract on p. 733 has been published in full on p. 1410. Abstracts of papers presented only at meetings, for which complete papers have not been published, are not included in this Author Index. A *Key to Authors and Papers* at meetings was published on pp. 694–697 and 1591–1594. Not included are the authors of the Post-Deadline Abstracts that appear on p. 1129.

Ackley, Margot H., with Clifford, Bouricius, and Ochs
phase variations in atmospheric propagation—61, 1279
Ahrenkiel, R. K.
modified Kramers–Kronig Analysis—61, 1651
Aleksoff, C. C.
holographic display of laser modes—61, 648A/1426L
Alexander, E., Even-Zohar, Fraenkel, and Goldsmith
classification of transitions in euv spectra—61, 508
Alexopoulos, Nicolaos G.
scattering from inhomogeneous lenses—61, 876
Alley, C. O., with Chang, Currie, and Pittman
far-field pattern of corner reflectors—61, 431
Allison, Arthur C., with K. H. Becker and E. H. Fink
calibration of spectroscopic system—61, 495
Altman, C., and S. G. Lipson
propagation through a birefringent multilayer—61, 1373
Anastassakis, E., and E. Burstein
second-order electro-optic effect in diamond—61, 1618
Anderson, Richard A., with J. G. Chervenak
radiative lifetime of the $A^1\Pi$ state of CO—61, 952
Anderson, Roland C., and R. N. Hager
theory of derivative spectrometer, II.—61, 1269L
Andréasson, S. Dan H., S. E. Gustafsson, and N.-O. Halling
measurement of refractive index—61, 595
Andrew, Kenneth L., with Hui Li
first spark spectrum of arsenic—61, 96
——, with James R. Beacham
hyperfine structure of Rb resonance lines—61, 231
Arakawa, E. T., with Whang and Callcott
optical properties of Cs—61, 740
Armington, John C., T. R. Corwin, and Robert Marsetta
retinal and cortical responses to patterns—61, 1514
Armstrong, Lloyd, Jr.
Symmetry Atomic Spectroscopy, Wybourne—61, 550R
Arnaud, J. A.
mode coupling in first-order optics—61, 751
Arrathoon, Raymond
helium metastable transition probabilities—61, 332
Arsenault, Henri H.
roughness determination with laser speckle—61, 1425L
Asby, R., and Emil Wolf
field of a uniformly moving charged particle—61, 52
Aslaksen, Erik W.
parametric interaction between three beams—61, 320
Aspnes, D. E.
first-order errors in ellipsometry—61, 1077
Azzam, R. M. A., and N. M. Bashara
ellipsometry errors due to imperfect components—61, 600
effect of cell windows in ellipsometry—61, 773
calibration of ellipsometer divided circles—61, 1118L
coherent scattering in ellipsometry—61, 1236
ellipsometry with imperfect components—61, 1380
Baker, Stanley C.
oscillator strengths for Fe III—61, 271L
Ballard, Stanley S.
Undergraduate Instrument Analysis, Robinson—61, 548R
Banderet, L. E., and W. H. Payne
visual masking following transient adaptation—61, 955
Barr, E. Scott
Theories of Light from Descartes to Newton, Sabra—61, 133R
Nature of Light: An Historical Survey, Ronchi—61, 1717R
Barrett, J. J., and S. A. Myers
interferometric method for periodic spectra—61, 1246
Bashara, N. M., with R. M. A. Azzam
ellipsometry errors due to imperfect components—61, 600
effect of cell windows in ellipsometry—61, 773
calibration of ellipsometer divided circles—61, 1118L
coherent scattering in ellipsometry—61, 1236
ellipsometry with imperfect components—61, 1380
——, with L. G. Holcomb
elasto-optic effect in absorbing materials—61, 608
——, with M. M. Ibrahim
multiple-angle ellipsometry—61, 1622
——, with J. A. Johnson
multiple-angle-of-incidence ellipsometry—61, 457
Bashkin, S., and I. Martinson
energy levels and mean lives of Cl II–Cl VII—61, 1686
——, with Berry, Bickel, Désesquelles, and Schectman
beam-foil studies of nitrogen—61, 947
Bass, Arnold M., with N. C. Peterson *et al.*
enhancement of absorption spectra by dye laser—61, 746
Bates, Harry E.
noncollinear phase matching in $LiNbO_3$—61, 904
Baumel, Robert T., and Stephen E. Schnatterly
silicon reflection polarizer for the infrared—61, 832L
Beacham, James R., and Kenneth L. Andrew
hyperfine structure of Rb resonance lines—61, 231
Becker, Karl H., E. H. Fink, and A. C. Allison
calibration of spectroscopic system—61, 495
Behring, W., with Feldman, Katz, and Cohen
spectra of Fe, Co, Ni, and Cu—61, 91
——, with Hoory, Goldsmith, Feldman, and Cohen
boron-like spectra: Mg VIII, Al IX, Si X—61, 504
Bell, Robert J.
Far-Infrared Techniques, Kimmitt—61, 278R
Far-Infrared Spectroscopy, Möller, Rothschild—61, 1542R
Benton, Stephen A., and Richard E. Kronauer
properties of granularity Wiener spectra—61, 524
Beran, Mark J., and Alan M. Whitman
beam propagation in a random medium—61, 1044
Bergstein, Leonard, and Thomas H. Zachos
diffraction in uniaxially anisotropic media—61, 1477
Berry, H. G.
high-resolution observations of He II, 3204 Å—61, 123L
new identifications and lifetimes in sulfur—61, 983L

——, Bickel, Bashkin, Désesquelles, and Schectman
beam-foil studies of nitrogen—61, 947
——, with Martinson, Bickel, and Oona
mean lives of excited levels in O I–O VI—61, 519
Bertoni, H. L., with T. Tamir
displacement at multilayered structures—61, 667A/1397
Bhawalkar, D. R., with B. R. Malhotra
spectra of Zr- and Di-activated phosphors—61, 1118L
Bickel, W. S., with Martinson, Berry, and Oona
mean lives of excited levels in O I–O VI—61, 519
——, with Berry, Bashkin, Désesquelles, and Schectman
beam-foil studies of nitrogen—61, 947
Biedermann, Klaus
reversal in carrier-frequency photography—61, 1439
Bisbee, D. L., with A. R. Tynes and A. D. Pearson
losses in clad glass fibers and bulk glass—61, 143
Bitterli, C. V., with A. I. Mahan and H. J. Unger
properties of absorbing and active cylinders—61, 577
Blaise, J., J. F. Wyart, R. Hoekstra, P. J. G. Kruiver
analysis of Nd I and Nd II—61, 1335
Blevin, W. R.
corrections for instrumental broadening—61, 835L
Bouricius, G. M. B., with Clifford, Ochs, and Ackley
phase variations in atmospheric propagation—61, 1279
Boyer, L., and R. Vacher
polarization-modulation Brillouin spectroscopy—61, 1424L
Brandt, Gerald B.
Applications of Holography, Caulfield, Lu—61, 1125R
Braun, Walter, with N. C. Peterson *et al.*
enhancement of absorption spectra by dye laser—61, 746
Brewer, Leo
configurations of lanthanides and actinides—61, 1101
energy levels of lanthanides and actinides—61, 1666
Brookner, Eli
log-amplitude fluctuations of a laser beam—61, 641L
Brown, John Lott
Clarence Henry Graham—61, 1544N
Brown, Wilbur P., Jr.
variance of irradiance scintillation—61, 981L
second moment of a wave in a random medium—61, 1051
Bryngdahl, Olof
constant radial-displacement interferometry—61, 169
Buchman, W. W., S. J. Holmes, and F. J. Woodberry
single-wavelength thin-film polarizers—61, 1604
Burch, Darrell E., and David A. Gryvnak
absorption by CO_2 between 1100 and 1835 cm^{-1}—61, 499
Burstein, E., with E. Anastassakis
second-order electro-optic effect in diamond—61, 1618
Buser, R. G.
distance dependence of phase structure function—61, 488

Callcott, T. A., with U. S. Whang and E. T. Arakawa
optical properties of Cs—61, 740
Carlson, F. Paul, and Nai K. Shi
inhomogeneous toroidal open resonators—61, 1443
Carniglia, C. K., and L. Mandel
phase-shift measurement of evanescent waves—61, 1035
phase shifts of TE and TM evanescent waves—61, 1423L
Carroll, J. J., and A. J. Melmed
optical constants of (011) tungsten in visible—61, 470
Carter, J. L., and H. Hora
total reflection of matter waves—61, 1640
Cathey, Wade T., Jr.
probability weighting of spatial filters—61, 478
Cassidy, John C.
magneto-optic inputs in data processing—61, 378
Caufield, Karen, with J. A. Mann and G. Gulden
scattering from ultrathin free-liquid films—61, 76
Cernosek, Jan
analysis of elliptical polarization—61, 324
Ceyzériat, P., A. Denis, and M. Dufay
transition probabilities, lifetimes, Ar III—61, 641L
Chabrier, Gérard, with Vernier, Goudonnet, Cornas
properties of amorphous germanium films—61, 1065
Chaghtai, Mirza-uz-Zafar
$4p^3$–$4p^35s$ transitions in Nb IX—61, 1264L
Chang, R. F., Currie, Alley, and Pittman
far-field pattern of corner reflectors—61, 431
Chau, Henry H., and G. W. Leppelmeier
carrier-frequency shift in holography—61, 998
Chen, Che Jen
transition probabilities for Ar I—61, 1267L
Chervenak, J. G., and Richard A. Anderson
radiative lifetime of $A^1\Pi$ state of CO—61, 952
Chickering, K. D.
FMC color-difference formulas—61, 118
Chojnacki, D. A., with Kohl, Curtis, Schectman
cascade decay in atomic-transition probability—61, 1656
Chrenko, R. M., with Glen A. Slack
optical absorption of natural garnets—61, 1325
Chuckrow, R., and H. H. Stroke
hfs in 3067-Å line of ^{207}Bi—61, 218
Clark, William G., and Edward L. O'Neill
photoelectron count distributions—61, 934
Clauser, M. J., with Loescher and Detry
film–substrate problem in ellipsometry—61, 664A/1230
Clifford, Steven F.
spherical wave propagating through turbulence—61, 1285
——, Bouricius, Ochs, and Ackley
phase variations in atmospheric propagation—61, 1279
Cohen, Leonard, with Feldman, Katz, and Behring
spectra of Fe, Co, Ni, Cu—61, 91
——, with Hoory, Goldsmith, Feldman, Behring
boron-like spectra: Mg VIII, Al IX, Si X—61, 504
——, with Goldsmith and Feldman
euv spectra of Sc XIV, Ti XV, V XVI—61, 615
Collins, Stuart A., Jr., with Wyngaard and Izumi
refractive-index structure near ground—61, 1552A/1646
Coltman, John W.
Progress in Optics VIII, E. Wolf, Ed.—61, 1124R
Condell, William J.
Lasers, 2nd ed., Lengyel—61, 1720R
Conway, John G., and Earl F. Worden
preliminary level analysis of Dy I and Dy II—61, 704
Cornaz, Jean, with Vernier, Goudonnet, Chabrier
properties of amorphous germanium films—61, 1065
Corwin, Thomas R.
effect of masking on contrast of gratings—61, 1172
——, with J. C. Armington and Robert Marsetta
retinal and cortical responses to patterns—61, 1514
Cox, J. Thomas, G. Hass, and W. R. Hunter
optical properties of evaporated Rh films—61, 360
Curnutte, B., with Pinnington and Dufay
beam-foil-excited Ar spectrum, 500–1000 Å—61, 978L
Currie, D. G., with Chang, Alley, and Pittman
far-field pattern of corner reflectors—61, 431
Curtis, L. J., with Kohl, Schectman, and Chojnacki
cascade decay in atomic-transition probability—61, 1656

Das, N. C., with M. V. R. K. Murty
theory of holographic diffraction gratings—61, 1001
DaVia, James, with Yarosewick and Moore
new energy levels of Mn III—61, 732
Davidson, Michael, and John A. Whiteside
brightness perception near sharp contours—61, 530
——, with John A. Whiteside
symmetrical bright and dark Mach bands—61, 958
Davis, Sumner P., with James C. Erhardt
wavelengths and energy levels in gold—61, 1342
De Micheli, R., and L. Giulotto
Brillouin scattering by acoustic field—61, 1007

Denis, A., with P. Ceyzériat and M. Dufay
transition probabilities, lifetimes, Ar III—61, 641L
Desai, U. G., N. M. Gailar, and R. J. Lovell
line shifts in first overtone of DF—61, 573
Désesquelles, J., with Berry, Bickel, Bashkin, Schectman
beam-foil studies of nitrogen—61, 947
Detry, R. J., with D. H. Loescher and M. J. Clauser
film–substrate problem in ellipsometry—61, 664A/1230
Devir, Adam D.
Stark effect in CH_3Cl and Q switching—61, 1660
DiNardo, R. P., and A. N. Goland
transition radiation of evaporated C foil—61, 1321
Drexhage, Karl
... *Fluorescence Literature, 2,* Passwater—61, 642R
Druetta, M., M. C. Poulizac, and M. Dufay
assignments, mean lives for O II and O III—61, 515
Dufay, M., with Druetta and Poulizac
assignments, mean lives for O II and O III—61, 515
——, with Ceyzériat and Denis
transition probabilities, lifetimes, Ar III—61, 641L
——, with E. H. Pinnington and B. Curnutte
beam-foil-excited Ar spectrum, 500–1000 Å—61, 978L
Dyjak, Charles P., W. W. McCormick, and R. A. Sawyer
paraterphenyl as detector in extreme uv—61, 1011

Eckert, E. R. G., with M. Ruiz-Urbieta and E. M. Sparrow
thickness and optical constants of films—61, 351
thickness and refractive indices of films—61, 1392
Eichmann, George
quasi-geometric optics of inhomogeneous media—61, 161
Einstein, F. S., R. A. Juliano, Jr., and C. Pine
far-field diffraction by semi-infinite plane—61, 1487
Eliasson, B., and F. M. Mottier
granular radiance distribution of a diffuser—61, 559
Engelhard, E. J. G., and Kamal Abdel-Hady Mohammed
pressure–wavelength dependence of He–Ne laser—61, 216
den Engelsen, D.
ellipsometry of anisotropic films—61, 1460
Engleman, Rolf, Jr., with Radziemski and Steinhaus
absorption spectra of uranium—61, 672A/1538L
Enoch, Jay M., with Roland Winston
retinal cone as an ideal light collector—61, 1120L
Erhardt, James C., and Sumner P. Davis
wavelengths and energy levels in gold—61, 1342
Estes, Lee E., L. M. Narducci, and R. A. Tuft
scattering from rotating ground glass—61, 691A/1301
Evans, C. H.
Color Television, O'Brien, Ed.—61, 548R
Evans, Evan A.
superresolution of red-blood-cell holograms—61, 991

Feldman, U., L. Katz, W. Behring, and L. Cohen
spectra of Fe, Co, Ni, Cu with Na I and Mg I—61, 91
——, with S. Goldsmith and L. Cohen
euv spectra of Sc XIV, Ti XV, and V XVI—61, 615
——, with Hoory, Goldsmith, Behring, and Cohen
boron-like spectra: Mg VIII, Al IX, Si X—61, 504
Feldman, Michel
modes in gaussian optical systems—61, 446
Fernelius, Nils, and Conrad Tome
vibration analysis using laser speckle—61, 566
Fielder, G. H., with Gunter Wyszecki
new color-matching ellipses—61, 1135
color-difference matches—61, 1501
Filler, A. S.
multislits with Boltzmann interferometers—61, 835L
Fillmore, Gary L., and Richard F. Tynan
hardened dichromated-gelatin films—61, 199
Fink, Ewald H., with Becker and Allison
calibration of spectroscopic system—61, 495
Fischer, John E., and James O. Porteus
resolution corrections of electroreflectance—61, 980L
Flaherty, Thomas B., and Halsey H. Matteson
comparison of two measures of metacontrast—61, 828
Foley, John M., with Whitman Richards
processing of binocular disparity—61, 419L
Forno, C., and O. C. Jones
window corrections in spectroradiometry—61, 416L
Foster, Walter H., Jr., and E. I. Stearns
diffuse transmittance of glass—61, 60
Fraenkel, B. S., with Alexander, Even-Zohar, Goldsmith
classification of transitions in euv spectra—61, 508

Gailer, N. M., with U. G. Desai and R. J. Lovell
line shifts in first overtone of DF—61, 573
Garscadden, A., with R. F. Weber
errors of spectral-line intensities—61, 1330
Garstang, R. H.
Atomic Spectra, second ed., Kuhn—61, 1123R
Gentili, K. L., with J. G. Old and E. R. Peck
dispersion of carbon dioxide—61, 89
Ghatak, Ajoy Kumar, with M. S. Sodha and D. P. S. Malik
propagation in radially nonuniform media—61, 1492
Gilinsky, Alberta S., and Tommie H. Mayo
inhibitory effects of adaptation—61, 689A/1710
Giulotto, L., with R. De Micheli
Brillouin scattering by acoustic field—61, 1007
Goland, A. N., with R. P. DiNardo
transition radiation of evaporated C foil—61, 1321
Golay, Marcel J. E.
compact, nonredundant point arrays—61, 272L
Goldsmith, S., U. Feldman, and L. Cohen
euv spectra of Sc XIV, Ti XV, V XVI—61, 615
——, with Hoory, Behring, and Cohen
boron-like spectra: Mg VIII, Al IX, Si X—61, 504
——, with Alexander, Even-Zohar, and Fraenkel
classification of transitions in euv spectra—61, 508
Goodman, J. W., with F. D. Russell
aberration compensation—61, 182
Gori, F., and G. Guattari
coherence and degrees of freedom of an image—61, 36
Goudonnet, Jean-Pierre, with Vernier, Chabrier, Cornaz
properties of amorphous germanium films—61, 1065
Graves, R. H. W.
generalized principal angle of incidence—61, 274L
Greenspon, Thomas S., with Peter K. Kaiser
brightness difference and border distinctness—61, 962
Greer, Milton O., with Wai-Hon Lee
noise characteristics of photographic emulsions—61, 402
Griffin, P. M., and J. W. Hutcherson
oscillator strengths of resonance lines—61, 136E
Grimes, D. N.
resolution in partially coherent illumination—61, 870
linear microdensitometry—61, 1263L
Grum, Franc
Infrared Spectroscopy: Methods, Stewart—61, 547R
——, D. J. Paine, and J. L. Simonds
particle-size distributions—61, 70
Grunberg, P., J. A. Koningstein, L. G. Van Uitert
optical phonons in iron garnets—61, 1613
Gryvnak, David A., with Darrell E. Burch
absorption by CO_2 between 1100 and 1835 cm^{-1}—61, 499
Guattari, G., with F. Gori
coherence and degrees of freedom of an image—61, 36
Gulden, Gerald, with J. A. Mann, Jr. and K. Caufield
scattering from ultrathin free-liquid films—61, 76
Gustafsson, Silas E., with Andréasson and Halling
measurement of refractive index—61, 595
Guth, Sylvester K.
Vision and Highway Safety, Allen—61, 838R

Hager, R. N., with Roland C. Anderson
theory of derivative spectrometer, II.—61, 1269R
Halling, Nils-Olov, with Andréasson and Gustafsson
measurement of refractive index—61, 595
Hansteen, Ralph W.
visual latency as function of stimulus onset—61, 1190
Harris, J. H., with R. Shubert
optical guided-wave focusing, diffraction—61, 154
Haskell, Richard E.
nomographs for holographic imaging—61, 126L
Hass, Georg, with J. T. Cox and W. R. Hunter
optical properties of evaporated Rh films—61, 360
Head, Charles E., with Warren B. McCrocklin, Jr.
radiative lifetimes of N II beams on He—61, 619
Heaton, Harold I.
infrared refractive indices of alkali halides—61, 275L
Hebner, Robert E., Jr., and Kaare J. Nygaard
selective depopulation of Cs $6^2S_{\frac{1}{2}}(F=3)$ level—61, 1455
Heggestad, Harold M.
multiple scattering in optically thick clouds—61, 1293
Heinisch, R. P.
infrared mirror-scatter measurements—61, 1225
Herman, Stephen
Fourier analysis of imaging lenses—61, 1428L
Hill, B.
spatial noise in optical data storage—61, 386
Hill, K. O., and G. W. Jull
holographic-recording-noise reduction—61, 399
Hisdal, Ellen
information in a photon beam—61, 328
Hoekstra, R., with Blaise, Wyart, and Kruiver
analysis of Nd I and Nd II—61, 1335
Hofmann, Walter, and Gerhard L. Weissler
photoionization cross section of C I continuum—61, 223
Holcomb, L. G., and N. M. Bashara
elasto-optic effect in absorbing materials—61, 608
Holmes, S. J., with Buchman and Woodberry
single-wavelength thin-film polarizers—61, 1604
Honigbaum, A., with Reisfeld and Velapoldi
Tl-doped KCl disks, uv fluorescence standards—61, 1422L
Hoory, S., Goldsmith, Feldman, Behring, and Cohen
boron-like spectra: Mg VIII, Al IX, and Si X—61, 504
Hopkins, Robert E.
remarkable field of geometrical optics—61, 290
Hora, H., with J. L. Carter
total reflection of matter waves—61, 1640
Horowitz, B. R., and T. Tamir
displacement of beam at dielectric interface—61, 586
Huber, Gunter, and Curt Wittig
ir laser transitions in atomic O and S—61, 415L
Huen, T., with G. B. Irani and F. Wooten
optical constants of silver and gold—61, 128L
Humphreys, Curtis J., Paul, and Minnhagen
first spectra of Cl, Br, and I in 4-μm region—61, 110
Hunter, W. R., with J. T. Cox and G. Hass
optical properties of evaporated Rh films—61, 360
Hutcherson, J. W., with P. M. Griffin
oscillator strengths of resonance lines—61, 136E
Hyde, W. Lewis, and Leslie O. Vargady
Alexander Marjoros—61, 551N

Ibrahim, M. M., and N. M. Bashara
multiple-angle ellipsometry—61, 1622
Ikeda, Mitsuo
flicker heterochromatic threshold reduction—61, 261
——, with Toshio Uetsuki
adaptation and critical durations—61, 821
Ioli, N., F. Strumia, and A. Moretti
sodium-vapor density at very low pressures—61, 1251
Irani, G. B., T. Huen, and F. Wooten
optical constants of silver and gold—61, 128L
Itoh, Yoshinobu
diffraction-based merit function—61, 302
Ivey, Henry F.
Proc. Conf. Luminescence, Williams, Ed.—61, 135R
Iwadate, Kazumi, with Sato, Yamagishi, and Ueda
phase modulation by ultrasonic waves—61, 1715L
Izumi, Y., with Wyngaard and Collins
refractive-index structure near ground—61, 1552A/1646

James, T. H.
Photochemistry, Wayne—61, 1432R
Jan, George, and Harold Mendlowitz
imaging with spectral-density functions—61, 865
Janků, V., with V. Vyšín
pressure variation, rotatory power of α quartz—61, 770
Jenney, J. A.
holographic recording with photopolymers—61, 281E
fixing of photopolymer holograms—61, 649A/1116L
Jeppesen, Myron A.
States, Waves and Photons, Simmons, Guttmann—61, 422R
Thin Film Physics, Heavens—61, 1125R
Jodoin, R., and L. Mandel
information rate in communication channel—61, 191
Johansson, Sveneric, and Ulf Litzén
resonance lines of La III—61, 1427L
Johnson, J. A., and N. M. Bashara
multiple-angle-of-incidence ellipsometry—61, 457
Johnson, Peter D.
Hg resonance in low-pressure discharge—61, 1451
Jones, Alan L., with Joseph P. Kirk
phase-only complex-valued spatial filter—61, 1023
Jones, O. C., with C. Forno
window corrections in spectroradiometry—61, 416L
Joyeux, Denis, with Serge Lowenthal
speckle removal by slowly moving diffuser—61, 847
Juliano, R. A., Jr., with Einstein and Pine
far-field diffraction by semi-infinite plane—61, 1487
Jull, G. W., with K. O. Hill
holographic-recording-noise reduction—61, 399
Jupnik, Helen
Optical Microscopy of Metals, Gifkins—61, 642R

Kaiser, Peter K.
minimally distinct border as criterion—61, 966
——, and Thomas S. Greenspon
brightness difference and border distinctness—61, 962
Kalhor, H. A., and A. R. Neureuther
numerical analysis of diffraction gratings—61, 43
Kapany, N. S., and T. Sawatari
evaluation of fiber-optics imagery—61, 314
Kastner, J., with A. Strash and R. Langs
efficient Kerr cell for use in uv—61, 131L
Kastner, Sidney O.
term splittings for Li I, B I, Na I sequences—61, 335
Kato, Yoshiaki, and Hiroshi Takuma
Raman-scattering cross sections of liquids—61, 347
Katz, L., with Feldman, Behring, and Cohen
spectra of Fe, Co, Ni, Cu with Na I, Mg I—61, 91
Kaufman, Victor, and Jack Sugar
one-electron spectrum of Lu III—61, 1693
Keller, Joseph B., and William Streifer
complex rays, application to gaussian beams—61, 40/687A
Keller, Richard, with N. C. Peterson *et al.*
enhancement of absorption spectra by dye laser—61, 746
Kelly, Donald H.
theory of flicker: uniform fields, gratings—61, 537, 632
Kermisch, Dorian
efficiency of photochromic gratings—61, 1202
Kerr, David W., and C. Harvey Palmer
anomalous behavior of thin-wire gratings—61, 450

Kinbara, Akira, with Yoshida and Yamaguchi
optical properties of aggregated silver films—61, 62
changes of optical properties of silver films—61, 463
Kingslake, Rudolf
Optical Instruments, Techniques, Dickson, Ed.—61, 548R
Kirk, Joseph P., and Alan L. Jones
phase-only complex-valued spatial filter—61, 1023
Kleiman, H., and R. W. O'Neil
deflection of laser beam in absorbing gas—61, 12
Knausenberger, W. H., with S. S. So and K. Vedam
ellipsometric liquid-immersion methods—61, 124L
Koechner, W., and D. K. Rice
birefringence of YAG:Nd laser rods—61, 758
Kohl, J. L., Curtis, Schectman, and Chojnacki
cascade decay in atomic-transition probability—61, 1656
Kong, Jin Au
biaxial crystal optics—61, 49
Koningstein, J. A., with Grunberg and Van Uitert
optical phonons in iron garnets—61, 1613
Kornfeld, G. H., and W. R. Lawson
visual-perception models—61, 811
Kreye, W. C.
wide-lorentzian-width Ar II, Ne II lines—61, 833L
Kronauer, Richard E., with Stephen A. Benton
properties of granularity Wiener spectra—61, 524
Kruiver, P. J. G., with Blaise, Wyart, and Hoekstra
analysis of Nd I and Nd II—61, 1335
Kubota, Toshihiro, and Teruji Ose
interference patterns of hologram aberrations—61, 1539L
Kurylo, Michael J., with N. C. Peterson *et al.*
enhancement of absorption spectra by dye laser—61, 746

Lahart, Martin J.
correlation with magnification and rotation—61, 985E
Lamb, Wilson, with Schenck and Van Ryzin
turbidity-temperature profiles—61, 831L
Land, Edwin H., and John J. McCann
lightness and retinex theory—61, 1
Langenbeck, Peter
neutral-reference-beam shear interferometer—61, 172
Langs, R., with A. Strash and J. Kastner
efficient Kerr cell for use in uv—61, 131L
Lanzl, F., H. J. Mager, and W. Waidelich
coherent optical computer for interferograms—61, 1355
Lauer, James L.
Laser Raman Spectroscopy, Tobin—61, 1719R
Lawson, W. R., with G. H. Kornfeld
visual-perception models—61, 811
Lee, K. O., and Y. P. Neo
polarization in ir grating instruments—61, 273L
Lee, S. H., with S. K. Yao
differentiation by coherent correlation—61, 474
Lee, Wai-Hon, and Milton O. Greer
noise characteristics of photographic emulsions—61, 402
Leith, Emmett N., with C. F. Stubenrauch
use of holograms in depth-cue experiments—61, 1268L
Leppelmeier, G. W., with Henry H. Chau
carrier-frequency shift in holography—61, 998
Lessard, R. A., with S. C. Som
technique for holographic multiplexing—61, 1240
Levey, L., and S. Maurer
asymptotic description of beam modes—61, 1699
Li, Hui, and Kenneth L. Andrew
first spark spectrum of arsenic—61, 96
Lin, L. H.
characterizing hologram-recording materials—61, 203
Lipson, S. G., with C. Altman
propagation through birefringent multilayer—61, 1373
Liszt, Harvey S., with William Hayden Smith
absolute oscillator strengths—61, 938
Lit, John W. Y.
half-wave filter on portion of perfect lens—61, 297
Vibrations Lumineuses, Françon—61, 838R
Cavités Electromagnétiques, Boudouris—61, 1543R
Litzén, Ulf, with Sveneric Johansson
resonance lines of La III—61, 1427L
Livingston, A. E., Jr., with E. H. Pinnington
spectra of neutral and singly ionized Ho—61, 1429L
Loescher, D. H., R. J. Detry, and M. J. Clauser
film–substrate problem in ellipsometry—61, 664A/1230
Losee, David L.
Solid State Spectroscopy, Frisch, Ed.—61, 643R
Proc. Conf. Conductivity, Pell, Ed.—61, 1718R
Losonsky, William
low-energy foil-excited neon spectra—61, 129L
Lotmar, W.
theoretical eye model with aspherics—61, 1522
Lovell, R. J., with Desai and Gailar
line shifts in first overtone of DF—61, 573
Lowenthal, Serge, and Denis Joyeux
speckle removal by slowly moving diffuser—61, 847
Ludwig, U. W.
ray-trace equations for conic surfaces—61, 1121L
Lukeš, F., with Ohlídal and Navrátil
reflection by nonabsorbing isotropic film—61, 1630
Lutomirski, R. F., and H. T. Yura
mutual coherence of wave in atmosphere—61, 842

MacAdam, David L.
Visual Perception, Cornsweet—61, 276R
John Pecham and···Optics, Lindberg, Ed.—61, 278R
Introd···Meteorological Optics, Tricker—61, 1270R
McCaffrey, John F., N. T. McDevitt, and C. M. Phillippi
ir lattice spectra of rare-earth pyrochlores—61, 209
McCann, John J., with Edwin H. Land
lightness and retinex theory—61, 1
McCormick, W. Wallace, with Dyjak and Sawyer
paraterphenyl as detector in extreme uv—61, 1011
McCrocklin, Warren B., Jr., and Charles E. Head
radiative lifetimes of N II using beams on He—61, 619
McDevitt, Neil T., with McCaffrey and Phillippi
ir lattice spectra of rare-earth pyrochlores—61, 209
McMahon, D. H.
aberrations in Fourier-transform data storage—61, 915
Macomber, James D.
wave propagation in stratified media—61, 308
Mager, H. J., with F. Lanzl and W. Waidelich
coherent optical computer for interferograms—61, 1355
Mahan, A. I., C. V. Bitterli, and H. J. Unger
properties of absorbing and active cylinders—61, 577
Malhotra, B. R., and D. R. Bhawalkar
spectra of Zr- and Di-activated phosphors—61, 1118L
Malik, D. P. S., with M. S. Sodha and A. K. Ghatak
propagation in radially nonuniform media—61, 1492
Mandel, Leonard, with R. Jodoin
information rate in communication channel—61, 191
——, with C. K. Carniglia
phase shift measurement of evanescent waves—61, 1035
phase shifts of TE and TM evanescent waves—61, 1423L
Mann, J. Adin, Jr., Karen Caufield, and Gerald Gulden
scattering from ultrathin free-liquid films—61, 76
Marathay, A. S.
propagation through cholesteric liquid crystals—61, 1363
Markoff, Joseph I., and Joseph F. Sturr
determinants of increment threshold—61, 1530
Marsetta, Robert, with Armington and Corwin
retinal and cortical responses to patterns—61, 1514
Martin, W. C.
two spectroscopic systems in lanthanide atoms—61, 1682
Martinson, Indrek, H. G. Berry, W. S. Bickel, H. Oona
mean lives of excited levels in O I–O VI—61, 519

——, with S. Bashkin
energy levels, mean lives of Cl II–Cl VII—61, 1686
Matsumoto, Kazuya
holographic multiple-beam interferometry—61, 176
Matteson, Halsey H.
effects of surround on latency in fovea—61, 1169
——, with Thomas B. Flaherty
comparison of two measures of metacontrast—61, 828
Maurer, S., with L. Levey
asymptotic description of beam modes—61, 1699
Mayo, Tommie H., with Alberta S. Gilinsky
inhibitory effects of adaptation—61, 689A/1710
Mellman, Stephen, with Leonard S. Taylor
propagation of mutual coherence—61, 236
Melmed, A. J., with J. J. Carroll
optical constants of (011) tungsten in visible—61, 470
Mendlowitz, Harold, with George Jan
imaging with spectral-density functions—61, 865
Mertz, Pierre
Photoelectronic Devices, Biberman, Ed.—61, 1431R
Meyer-Arendt, Jurgen R.
Optics, Klein—61, 277R
Michels, D. J., S. G. Tilford, and J. W. Quinn
extreme-uv spectrum of N IV—61, 625
Middleton, W. E. Knowles
Seeing Beyond the Visible, Hewish, Ed.—61, 548R
Minnhagen, Lennart
accurate ground-term combinations of Ar II—61, 1257
——, with C. J. Humphreys and E. Paul, Jr.
first spectra of Cl, Br, I in 4-μm region—61, 110
Mitchell, McLaren P., with Harry W. Wessely
solar scintillation measurements—61, 242
Modesitt, G.
Moliere approximation for wave propagation—61, 797
Mohamed, Kamal Abdel-Hady, with E. J. G. Engelhard
pressure–wavelength dependence of He–Ne laser—61, 216
Molyneux, John E.
propagation of coherence in random medium—61, 248, 369
Moore, Duncan T.
lens design with continuously varying indices—61, 886
——, and P. J. Sands
3rd-order aberrations of inhomogeneous lenses—61, 1195
Moore, Frank L., Jr., with Yarosewick and DaVia
new energy levels of Mn III—61, 732
Moretti, A., with N. Ioli and F. Strumia
sodium-vapor density at very low pressures—61, 1251
Moses, Robert A.
Vernier optometer—61, 1539L
Mottier, F., with B. Eliasson
granular radiance distribution of diffuser—61, 559
Mumma, M. J., and E. C. Zipf
molecular branching-ratio technique—61, 83
Murty, M. V. R. K., and N. C. Das
theory of holographic diffraction gratings—61, 1001
Muth, Eginhard J., and Conrad G. Persels
constant-brightness surfaces—61, 1152
Myers, S. A., with J. J. Barrett
interferometric method for periodic spectra—61, 1246

Nachmias, Jacob, with M. B. Sachs and J. G. Robson
spatial-frequency channels in human vision—61, 1176
Narducci, Lorenzo, with L. E. Estes and R. A. Tuft
scattering from rotating ground glass—61, 691A/1301
Navrátil, K., with I. Ohlídal and F. Lukeš
reflection by nonabsorbing isotropic film—61, 1630
Neo, Y. P., with K. O. Lee
polarization in ir grating instruments—61, 273L
Nettleton, R. E.
optical anisotropy in cubic crystals—61, 1060
Neureuther, A. R., with H. A. Kalhor
analysis of diffraction gratings—61, 43
Nickerson, Dorothy
Charles Bittinger—61, 645N
Nováková, Olga, with Lucia Ronchi
luminance–time relation, various eccentricities—61, 115
Nowlan, Anne T., with L. Spillmann and Ernst Wolf
adaptation with opposite time courses—61, 1122L
Nugent, L. J., and K. L. Vander Sluis
energy differences for lanthanides, actinides—61, 1112
Nygaard, Kaare J., with Robert E. Hebner, Jr.
selective depopulation of Cs $6^2S_{\frac{1}{2}}(F=3)$ level—61, 1455

Ochs, G. R., with Clifford, Bouricius, and Ackley
phase variations in atmospheric propagation—61, 1279
Ohlídal, I., K. Navrátil, and F. Lukeš
reflection by nonabsorbing isotropic film—61, 1630
Old, J. G., K. L. Gentili, and E. R. Peck
dispersion of carbon dioxide—61, 89
Oldenberg, O.
short-duration nitrogen afterglow—61, 1092
reversal of intensities of bands of N_2—61, 1098
O'Neil, R. W., with H. Kleiman
deflection of laser beam in absorbing gas—61, 12
O'Neill, Edward L., with William G. Clark
photoelectron count distributions—61, 934
Oona, H., with Martinson, Berry, and Bickel
mean lives of excited levels in O I–O VI—61, 519
Ose, Teruji, with Toshihiro Kubota
interference patterns of hologram aberrations—61, 1539L
Osterberg, Harold, and Louis F. Rowe
Edgar D. Tillyer—61, 644N
Owens, James C.
Atmospheric Optics, Divari, Ed.—61, 278R

Paine, David J., with F. Grum and J. L. Simonds
particle-size distributions—61, 70
Palmer, C. Harvey, with David W. Kerr
anomalous behavior of thin-wire gratings—61, 450
Pan, Yuh Kang
Mathematical Methods for Physicists, Arfken—61, 421R
Parks, Edward A., with Whitman Richards
model for color conversion—61, 971
Paul, Edward, Jr., with Humphreys and Minnhagen
first spectra of Cl, Br, I in 4-μm region—61, 110
Payne, W. H., with L. E. Banderet
visual masking following transient adaptation—61, 955
Pearson, A. David, with A. R. Tynes and D. L. Bisbee
losses in clad glass fibers and bulk glass—61, 143
Peck, E. R., with J. G. Old and K. L. Gentili
dispersion of carbon dioxide—61, 89
Pegis, Richard J.
Equations of Mathematical Physics, Vladimirov—61, 1543R
Persels, Conrad G., with Eginhard J. Muth
constant-brightness surfaces—61, 1152
Peterson, Norman C., Kurylo, Braun, Bass, Keller
enhancement of absorption spectra by dye laser—61, 746
Phillippi, Conrad M., with McCaffrey and McDevitt
ir lattice spectra of rare-earth pyrochlores—61, 209
Pierce, A. Keith
Annual Rev. Astronomy, 8, Goldberg, Ed.—61, 421R
Pine, Charles, with Einstein and Juliano
far-field diffraction by semi-infinite plane—61, 1487
Pinnington, E. H., B. Curnutte, and M. Dufay
beam-foil-excited Ar spectrum, 500–1000 Å—61, 978L
——, with A. E. Livingston, Jr.
spectra of neutral and singly ionized Ho—61, 1429L
Pittman, M. E., with Chang, Currie, and Alley
far-field pattern of corner reflectors—61, 431
Plonus, M. A., with Henry H. Su
optical-pulse propagation in turbulent medium—61, 256

Porter, Robert P., and Walter C. Schwab
image formation with holograms—61, 789
Porteus, James O., with John E. Fischer
resolution corrections of electroreflectance—61, 980L
Poulizac, M. C., with M. Druetta and M. Dufay
assignments and mean lives for O II, O III—61, 515
Price, William H.
Lens Aberration Data, Palmer—61, 1123R

Querry, Marvin R., with A. N. Rusk and D. Williams
optical constants of water in ir—61, 895
Quinn, Jarus W., with D. J. Michels, S. G. Tilford
extreme-uv spectrum of N IV—61, 625

Radziemski, Leon J., Jr., D. W. Steinhaus, R. Engleman, Jr.
absorption spectra of uranium—61, 672A/1538L
Ramanathan, K. G., with G. L. Zuppardo
anomalous emissivities of nickel and iron—61, 1607
Regan, D., and C. W. Tyler
temporal summation for wavelength changes—61, 1414
Reisfeld, R., A. Honigbaum, and R. A. Velapoldi
Tl-doped KCl disks, uv fluorescence standards—61, 1422L
Remole, Arnulf
subjective patterns in flickering field—61, 1164
Rendleman, Paula, with D. Y. Teller, R. M. Rose
staircase simulations—61, 1429L
Rice, D. K., with W. Koechner
birefringence of YAG:Nd laser rods—61, 758
Rich, Nathan H., and H. L. Welsh
high-resolution Raman spectroscopy of gases—61, 977L
Richards, Whitman
anomalous stereoscopic depth perception—61, 410
——, and John M. Foley
processing of binocular disparity—61, 419L
——, and Edward A. Parks
model for color conversion—61, 971
Robertson, Charles W., and Dudley Williams
absorption coefficients of water in ir—61, 673A/1316
Robson, John G., with M. B. Sachs and J. Nachmias
spatial-frequency channels in human vision—61, 1176
Rogers, Gordon L.
tolerances in frozen-fringe holography—61, 784
stabilization with resonant reflector—61, 1117L
Ronchi, Lucia
threshold and correction of astigmatism—61, 1705
——, and Olga Nováková
luminance–time relation, various eccentricities—61, 115
Ropp, Richard C.
Fluorescence Analysis, White, Argauer—61, 549R
Rose, Richard M., with Teller and Rendleman
staircase simulations—61, 1429L
Rousseau, Martine
statistical properties of optical fields—61, 1307
Rowe, Louis F., with Harold Osterberg
Edgar D. Tillyer—61, 644N
Rowe, Stephen H.
interference fringes in holography—61, 1599
Rubin, Melvin L.
Color Blindness, Cruz-Coke—61, 422R
Ruiz-Urbieta, M., E. M. Sparrow, E. R. G. Eckert
thickness and optical constants of films—61, 351
thickness and refractive indices—61, 1392
Rusk, Alvin N., and Dudley Williams
optical constants of water in ir—61, 895
Russell, F. D., and J. W. Goodman
aberration compensation—61, 182

Sachs, Murray B., J. Nachmias, and J. G. Robson
spatial-frequency channels in human vision—61, 1176
Salisbury, Winfield W.
generation of light from free electrons—61, 423E
Samson, James A. R.
Beam-Foil Spectroscopy, Martinson *et al.*, Eds.—61, 1719R
Sancer, M. I., and A. D. Varvatsis
variance of irradiance scintillations—61, 982L
Sands, Peter John
inhomogeneous lenses—61, 777, 879, 1086, 1495
——, with Duncan T. Moore
3rd-order aberrations of inhomogeneous lenses—61, 1195
Sass, A. R.
binary-intensity holograms—61, 910
Sato, Takuso, Iwadate, Yamagishi, and Ueda
phase modulation by ultrasonic waves—61, 1715L
——, with Mitsuhiro Ueda
superresolution by holography—61, 418L
Sawatari, T., with N. S. Kapany
statistical evaluation of fiber-optics imagery—61, 314
Sawyer, Ralph A., with C. P. Dyjack, W. W. McCormick
paraterphenyl as detector in euv—61, 1011
Schectman, R. M., with Berry, Bickel, Bashkin, Désesquelles
beam-foil studies of nitrogen—61, 947
——, with Kohl, Curtis, and Chojnacki
cascade decay in atomic-transition probability—61, 1656
Schell, Richard G., and George Tyras
irradiance from truncated-gaussian field—61, 31
Schenck, H., Jr., J. Van Ryzin, and W. Lamb
turbidity-temperature profile—61, 831L
Schnatterly, Stephen E., with R. T. Baumel
silicon reflection polarizer for ir—61, 832L
Schwab, Walter C., with Robert P. Porter
image formation with holograms—61, 789
Scott, G. D., and R. Shirahata
phase-change correction of film thickness—61, 131L
Scott, Roderic M.
Spectroscopic Astrophysics:..., Herbig, Ed.—61, 134R
Seneff, Susan, with Lothar Spillmann
photochromatic intervals—61, 267
Shamey, L. J.
energy levels for highly ionized atoms, B I—61, 942
Shapiro, Jeffrey H.
reciprocity of the turbulent atmosphere—61, 492
Shares, Milton C.
In-Water Photography, Mertens—61, 551R
Shi, Nai K., with F. P. Carlson
inhomogeneous toroidal open resonators—61, 1443
Shirahata, R., with G. D. Scott
phase-change correction of film thickness—61, 131L
Shubert, R., and J. H. Harris
optical guided-wave focusing, diffraction—61, 154
Shurcliff, William A.
anti-contrail—61, 1132, 1595
Simonds, John L., with Grum and Paine
particle-size distributions—61, 70

staircase simulations—61, 1429L
Thelen, Alfred
design of optical minus filters—61, 365, 844
Thornton, W. A.
luminosity and color rendering of white light—61, 1155
Tilford, S. G., with D. J. Michels, J. W. Quinn
extreme-uv spectrum of N IV—61, 625
Tobin, Marvin C.
Far-Infrared Spectroscopy, Finch *et al.*—61, 277R
Tome, Conrad, with Nils Fernelius
vibration analysis using laser speckle—61, 566
Trabka, Eugene A.
effect of scaling optic-nerve impulses—61, 415L
crowded emulsions: granularity theory—61, 691A/800
Tuft, Richard A., with L. E. Estes, L. M. Narducci
scattering from rotating ground glass—61, 691A/1301
Tyler, C. W., with D. Regan
temporal summation for wavelength changes—61, 1414
Tynan, Richard F., with G. L. Fillmore
hardened dichromated-gelatin films—61, 199
Tynes, A. R., A. D. Pearson, D. L. Bisbee
losses in clad glass fibers and bulk glass—61, 143
Tyras, George, with Richard G. Schell
irradiance from truncated-gaussian field—61, 31

Ueda, Mitsuhiro, and Takuso Sato
superresolution by holography 61, 418L
——, with Sato, Iwadate, Yamagishi
phase modulation by ultrasonic waves—61, 1715L
Uetsuki, Toshio, and Mitsuo Ikeda
adaptation and critical duration—61, 821
Ulrich, R.
optimum excitation of optical surface waves—61, 1467
Unger, H. J., with A. I. Mahan and C. V. Bitterli
properties of absorbing and active cylinders—61, 577

Vacher, R., with L. Boyer
polarization-modulation Brillouin spectroscopy—61, 1424L
Vander Sluis, K. L., with L. J. Nugent
energy differences for lanthanides, actinides—61, 1112
Van Ryzin, J., with Schenck and Lamb
turbidity-temperature profiles—61, 831L
Van Uitert, L. G., with Grunberg and Koningstein
optical phonons in iron garnets—61, 1613
Vargady, Leslie O., with W. Lewis Hyde
Alexander Majoros—61, 551N
Varvatsis, A. D., with M. I. Sancer
variance of irradiance scintillations—61, 892L
Vedam, K., with S. S. So and W. H. Knausenberger
ellipsometric liquid-immersion methods—61, 124L
Velapoldi, R. A., with R. Reisfeld and A. Honigbaum
Tl-doped KCl disks, uv fluorescence standards—61, 1422L
Vernier, Pierre, Goudonnet, Chabrier, and Cornaz
properties of amorphous germanium films—61, 1065
Vilkomerson, David
distribution of irradiance in a hologram—61, 929
Vyšín, V., and V. Janků
pressure variation, rotatory power of α quartz—61, 770

Wagner, Peter J.
Photophysics of Aromatic Molecules, Birks—61, 1431R
Waidelich, W., with F. Lanzl and H. J. Mager
coherent optical computer for interferograms—61, 1355
Watts, R. K.
branching ratios for YAlG:Nd^{3+}—61, 123L
Weber, R. F., and A. Garscadden
errors of spectral-line intensities—61, 1330
Weissler, Gerhard L., with Walter Hofmann
photoionization cross section of C I continuum—61, 223

Welsh, H. L., with Nathan H. Rich
high-resolution Raman spectroscopy of gases—61, 977L
Wessely, Harry W., and McLaren P. Mitchell
solar scintillation measurements—61, 242
Westheimer, Gerald
Reading Disorders, Young, Lindsley, Eds.—61, 839R
Whang, U. S., E. T. Arakawa, T. A. Callcott
optical properties of Cs—61, 740
Whiteside, John A., and Michael L. Davidson
symmetrical bright and dark Mach bands—61, 958
——, with Michael Davidson
brightness perception near sharp contours—61, 530
Whitman, Alan M., with Mark J. Beran
beam propagation in a random medium—61, 1044
Whitney, Cynthia
Pauli operators in polarization optics—61, 1207
Wijngaard, W.
depolarization by frog rods—61, 1187
Williams, Dudley
. . . *Molecular Spectroscopy*, Herzberg—61, 1718R
——, with A. N. Rusk and M. R. Querry
optical constants of water in ir—61, 895
——, with Charles W. Robertson
absorption coefficients of water in ir—61, 673A/1316
Williamson, J. H.
simple multiple-pass birefringent filter—61, 767
Wilson, Alan D.
computed time-average holographic fringes—61, 924
Winston, Roland, and Jay M. Enoch
retinal cone as an ideal light collector—61, 1120L
Winthrop, John T.
propagation of structural information—61, 15
Wittig, Curt, with Gunter Hubner
ir laser transitions in atomic O and S—61, 415L
Wolf, E. L.
Amorphous and Liquid Semiconductors, Proc.—61, 134R
Wolf, Emil, with R. Asby
field of a uniformly moving charged particle—61, 52
Wolf, Ernst, with L. Spillmann and A. T. Nowlan
adaptation with opposite time courses—61, 1122L
Woodberry, F. J., with W. W. Buchman, S. J. Holmes
single-wavelength thin-film polarizers—61, 1604
Wooten, F., with G. B. Irani and T. Huen
optical constants of silver and gold—61, 128L
Worden, Earl F., with John G. Conway
preliminary level analysis of Dy I, Dy II—61, 704
Wright, W. D.
Sources of Color Science, MacAdam, Ed.—61, 549R
Wu, Jin
slope and curvature of wind-disturbed water—61, 852
Wyart, J. F., with Blaise, Hoekstra, Kruiver
analysis of Nd I and Nd II—61, 1335
Wyngaard, J. C., Y. Izumi, S. A. Collins, Jr.
refractive-index structure near ground—61, 1552A/1664
Wyszecki, Gunter, and G. H. Fielder
new color-matching ellipses—61, 1135
color-difference matches—61, 1501

Yamagishi, Genjiro, with Sato, Iwadate, and Ueda
phase modulation by ultrasonic waves—61, 1715L
Yamaguchi, Tomuo, with Yoshida and Kinbara
optical properties of aggregated silver films—61, 62
changes of optical properties of silver films—61, 463
Yao, S. K., and S. H. Lee
differentiation by coherent correlation method—61, 474
Yarosewick, Stanley J., DaVia and Moore
new energy levels of Mn III—61, 732
Yoshida, Sadafumi, T. Yamaguchi, and A. Kinbara
optical properties of aggregated silver films—61, 62
changes of optical properties of silver films—61, 463
Yura, H. T., with R. F. Lutomirski
mutual coherence of wave in atmosphere—61, 482

Zachos, Thomas H., with Leonard Bergstein
diffraction in uniaxially anisotropic media—61, 1477
Zipf, E. C., with M. J. Mumma
molecular branching-ratio technique—61, 83
Zuppardo, G. L., and K. G. Ramanathan
anomalous emissivities of nickel and iron—61, 1607

Subject Index to Volume 61

(1) Subjects, not titles, have been indexed.
(2) Contents of papers (and abstracts of papers presented at meetings) have been indexed by principal subjects rather than by a word breakdown of the title.
(3) Subheadings are arranged by page number (i.e., chronologically) under each heading except Book Reviews, Necrology, and Personalia, which are arranged alphabetically.

Aberrations

Optics, Klein—61, 277R

devices

neutral-reference-beam interferometer—61, 172
analysis of multiple-hologram elements—61, 667A
holographic lens systems—61, 667A
deformation of a wave front by flat plate—61, 685A
in Fourier-transform data storage—61, 915
theory of holographic diffraction gratings—61, 1001
interference patterns of hologram aberrations—61, 1539L

diffraction

diffraction-based merit function—61, 302
interferometric diffraction suppression—61, 1585A

eye

theoretical eye model with aspherics—61, 1522

image formation

aberration compensation—61, 182
interferometric removal of aberrations—61, 663A
broad-band holographic reconstruction—61, 668A

lens design

remarkable field of geometrical optics—61, 290
pupil aberration: a design limitation—61, 661A
optics of a pincushion lens—61, 685A
inhomogeneous lenses, chromatic—61, 777, 1495
lens design, continuously varying indices—61, 886
lenses with axial index distributions—61, 1086
Lens Aberration Data, Palmer—61, 1123R
3rd-order aberrations of inhomogeneous lenses—61, 1195

theory

self-focusing of focused beams—61, 670A

Absorption

saturable absorber in Fabry–Perot—61, 650A

materials

optical properties of aggregated Ag films—61, 62, 463
optical constants of silver and gold—61, 128L
loss in clad glass fibers and bulk glass—61, 143
thickness and optical constants of films—61, 351
(011) W optical constants in visible region—61, 470
elasto-optic effect in absorbing materials—61, 608
electro-optic materials—61, 666A
absorption coefficients of water in ir—61, 673A/1316
reflectance and optical constants of silver—61, 679A
uv absorption of gold colloids—61, 680A
partially absorbing glasses for night driving—61, 689A
optical properties of Cs—61, 740
of light in sea at thermocline—61, 831L
Electromagnetics of the Sea, AGARD—61, 985R
sodium-vapor density at very low pressures—61, 1251
optical constants of silver—61, 1264L
transition radiation of evaporated C foil—61, 1321
optical, natural garnets, impurities—61, 1325
ellipsometry of anisotropic films—61, 1469

spectra

line shifts in first overtone of DF—61, 573
absorption spectra of uranium—61, 672A/1538L
collision broadening of CO absorption lines—61, 673A
spectra enhancement by dye-laser quenching—61, 746
absorption line parameters—61, 1587A
photoabsorption resonances in lanthanides—61, 1590A
absorption spectra of highly ionized iron—61, 1591A

theory

propagation with nonlinear absorption—61, 12
wave propagation in stratified media—61, 308
properties of absorbing and active cylinders—61, 577
energy-band structure of gold—61, 680A
Ewald–Oseen extinction theorem—61, 1560A
emission and absorption of evanescent photons—61,1561A
multiple-angle ellipsometry—61, 1622

Actinides

configurations of lanthanides and actinides—61, 1101
energy differences for lanthanides, actinides—61, 1112
configurations for lanthanides and actinides—61, 1590A
energy levels of electronic configurations—61, 1666

Aluminum

boron-like spectra: Mg VIII, Al IX, Si X—61, 504
directionally cast Al mirror substrates—61, 684A
absolute oscillator strengths—61, 938

Argon

euv spectra of Sc XIV, Ti XV, V XVI—61, 615
transition probabilities, lifetimes in Ar III—61, 641L
wide-lorentzian-width Ar II, Ne II lines—61, 833L
beam-foil-excited Ar spectrum, 500–1000 Å—61, 978L
accurate ground-term combinations of Ar II—61, 1257
transition probabilities for Ar I—61, 1267L

Arsenic

first spark spectrum of arsenic—61, 96
Zeeman effect of As II—61, 1590A

Astronomy

Spectroscopic Astrophysics, Herbig, Ed.—61, 134R
Atmospheric Optics, Divari, Ed.—61, 278R
Annual Rev. Astronomy 8, Goldberg, Ed.—61, 421R
Seeing Beyond the Visible, Hewish, Ed.—61, 548R
coronagraph mirrors for near infrared—61, 665A
ir instrumentation for astronomy—61, 681A
radio interferometry at 0″.001 arc resolution—61, 682A
Kitt Peak and Cerro Tololo 4-m telescopes—61, 682A
spectrometer for astronomical observations—61, 687A
laser-ranging system at McDonald Observatory—61,692A
coronagraph contamination experiment—61, 694A
Survey of the Universe, Menzel *et al.*—61, 1271R
Spectral Analysis of Ba II Star, Tech—61, 1431R

Atmospheric optics

Atmospheric Optics, Divari, Ed.—61, 278R
atmospheric transmittance at low resolution—61, 670A
propagation of light pulses through clouds—61, 670A
size determination of ice crystals—61, 671A
size distribution of spherical polydispersions—61, 671A
ray trajectories in earth's atmosphere—61, 671A
measurement of optical scattering by aerosols—61, 671A
attenuation of solar radiation by clouds—61, 671A
earth radiance and solar irradiance in near uv—61, 672A
propagation of 10.6-μm laser beams—61, 674A
multiwavelength propagation experiments—61, 674A
phase-front deformation of laser beams—61, 675A
laser-propagation averaging times—61, 675A
laser beams propagating through turbulence—61, 675A
saturation of fluctuations by turbulence—61, 675A
irradiance fluctuations in turbulent air—61, 675A
measuring laser-beam direction fluctuations—61, 676A
effect of turbulence on detection processes—61, 676A
atmospheric-turbulence profile in troposphere—61, 676A
scintillation in maritime environment—61, 1064A
· · · *Meteorological Optics*, Tricker—61, 1270R

attenuation
attenuation by fogs between 2.3 and 3.6 μm—61, 672A
light-pulse propagation through thick clouds—61, 1549A

image transmission
propagation of mutual coherence—61, 236
solar scintillation measurements—61, 242
optical-pulse propagation in turbulent medium—61, 256
mutual coherence of wave in atmosphere—61, 482
distance dependence of phase structure function—61, 488
reciprocity of the turbulent atmosphere—61, 492
amplitude fluctuations of a laser beam—61, 641L
seeing from high-altitude jet aircraft—61, 675A
Moliere approximation for wave propagation—61, 797
variance of irradiance scintillation—61, 981L
beam propagation in a random medium—61, 1044
second moment of a wave in a random medium—61, 1051
phase variations in atmospheric propagation—61, 1279
spherical wave propagating through turbulence—61, 1285
daylight contrast of surfaces in atmosphere—61, 1549A
correlation in turbulent atmosphere—61, 1552A
phase structure function at 10.6 μm—61, 1552A
index fluctuations, propagation—61, 1552A/1646

scattering
multiple scattering in optically thick clouds—61, 1293
shadow of contrail on haze—61, 1132, 1595

spectral absorption
line shifts in first overtone of DF—61, 573

Barium

Spectral Analysis of Ba II *Star*, Tech—61, 1431R

Birefringence

boundary proximity in liquid-crystal films—61, 679A
in windows from strain—61, 600, 773
refractive properties of calcium molybdate—61, 1550A

measurements
Optical Microscopy of Metals, Gifkins—61, 642R
electro-optic effect in $BaTiO_3$—61, 679A
of YAG:Nd laser rods—61, 758
simple multiple-pass birefringent filter—61, 767
ellipsometry, SiO_2—61, 1077
ellipsometry of anisotropic films—61, 1460
second-order electro-optic effect in diamond—61, 1618

theory
analysis of elliptical polarization—61, 324
optical anisotropy in cubic crystals—61, 1060
coherent scattering in ellipsometry—61, 1236
gyrotropic and symmetric dielectric tensors—61, 1373
diffraction in uniaxially anisotropic media—61, 1477
first-order effect in moving anisotropic media—61, 1585A

Bismuth

hfs in 3967-Å line of ^{207}Bi—61, 218

Boron

term splittings for boron-like ions—61, 335
energy levels for highly ionized atoms—61, 842
absolute oscillator strengths—61, 938

Bromine

first spectra of Cl, Br, I in 4-μm region—61, 110

Cadmium

fluorescence of mixed CdS_xSe_{1-x} crystals—61, 678A

Calcium

absolute oscillator strengths—61, 938

Carbon

photoionization cross section of C I continuum—61, 223
Selected Tables...C I–VI, Moore—61, 838R
transition radiation of evaporated C foil—61, 1321

Cesium

optical properties, 3.6 to 9.6 eV—61, 740
selective depopulation of Cs $6^2S_{\frac{1}{2}}(F=3)$ level—61, 1455

Chlorine

first spectra of Cl, Br, I in 4-μm region—61, 110
energy levels and mean lives of Cl II–Cl VII—61, 1686

Cobalt

isoelectronic spectra with Na I, Mg I—61, 91

Coherence

Optics, Klein—61, 277R
Laser Fundamentals, Van Pelt *et al.*—61, 547R
Optical Instruments, Techniques, Dickson, Ed.—61, 548R
Optical Microscopy of Metals, Gifkins—61, 642R
visualization of large-variation phase objects—61, 656A
theory of a two-photon laser amplifier—61, 669A
laser-speckle interferometry—61, 687A
speckle removal by slowly moving diffuser—61, 847
Brillouin scattering by acoustic field—61, 1007
coherent scattering in ellipsometry—61, 1236
linear microdensitometry—61, 1263L
coherent optical computer for interferograms—61, 1355
ellipsometry with impferfect components—61, 1380
laser-radar air-pollution measurements—61, 1549A
Coherent Light, Harvey—61, 1719R

holography

carrier-frequency shift in holography—61, 998

theory

propagation of structural information—61, 15
and degrees of freedom of an image—61, 36
effect on information rate—61, 191
propagation of mutual coherence—61, 236
propagation of coherence in random medium—61,248,369
mutual coherence of wave in atmosphere—61, 482
irradiance fluctuations in turbulent air—61, 675A
partially coherent imaging—61, 687A
partially coherent illumination and resolution—61, 687A
temporal coherence of laser scattering—61, 691A/1301
Vibrations Lumineuses, Françon—61, 838R
imaging with spectral density functions—61, 865
resolution in partially coherent illumination—61, 870
beam propagation in a random medium—61, 1044
second moment of a wave in a random medium—61, 1051
phase variations in atmospheric propagation—61, 1279
conditions for microdensitometer linearity—61, 1588A
coherence area—61, 1589A
propagation of mutual coherence—61, 1589A

Color

John Pecham and Optics, Lindberg, Ed.—61, 278R
Color Television, O'Brien, Ed.—61, 548R
Sources of Color Science, MacAdam, Ed.—61, 549R
spatial-frequency filter for color TV camera—61, 656A

measurement

FMC color-difference formulas—61, 118

perception

lightness and retinex theory—61, 1
photochromatic interval—61, 267
scaling of perceived color differences—61, 688A
constant-hue loci—61, 688A
orientation-specific color after effects—61, 689A
brightness difference and border distinctness—61, 962
minimally distinct border as criterion—61, 966
new color-matching ellipses—61, 1135
constant-brightness surfaces—61, 1152
luminosity and color rendering of white light—61, 1155
subjective patterns in a flickering field—61, 1164
temporal summation for wavelength changes—61, 1414

Color vision

Color Blindness, Cruz-Coke—61, 422R
scaling of perceived color differences—61, 688A
model for color conversion—61, 971, 1568A
constant-brightness surfaces—61, 1152
color vision and color television—61, 1562A
neurophysiology of color vision—61, 1562A

discrimination

FMC color-difference formulas—61, 118
flicker heterochromatic threshold reduction—61, 261
brightness difference and border distinctness—61, 962

scales

color-difference matches—61, 1501

Colorimetry

FMC color-difference formulas—61, 118
Undergraduate Instrumental Analysis, Robinson—61,548R

Sources of Color Science, MacAdam, Ed.—**61**, 549R
model for color conversion—**61**, 971, 1568A
new color-matching ellipses—**61**, 1135
color-difference matches—**61**, 1501
color-difference evaluations—**61**, 1562A
three-color visual response—**61**, 1568A
spectrophotometric changes with colors—**61**, 1568A
sensing small displacements—**61**, 1584A

Computers

Annual Rev. Astronomy 8, Goldberg, Ed.—**61**, 421R
differentiation by coherent correlation—**61**, 474
surfacing of general aspherics—**61**, 652A
fast numerical processing of extended images—**61**, 657A
phase quantization in computer holograms—**61**, 657A
orthonormality in least-squares optimization—**61**, 660A
experiment with the STOE program—**61**, 660A
spline representation of aspheric surfaces—**61**, 661A
use of computer to acquire spectroscopic data—**61**, 673A
polychromic program for analysis of systems—**61**, 684A
electric field at image of optical system—**61**, 694A
binary-intensity holograms—**61**, 910
coherent optical computer for interferograms—**61**, 1355

Copper

wide-lorentzian-width Ar II and Ne II lines—**61**, 833L

Crystals

$RE_2Sn_2O_7$ and $RE_2Ti_2O_7$, infrared spectra—**61**, 209
. . . *Far-Infrared Spectroscopy*, Finch *et al.*—**61**, 277R
angle-tuned parametric oscillators—**61**, 669A
angular distribution of fluorescence—**61**, 673A
fluorescence of mixed CdS_xSe_{1-x} crystals—**61**, 678A
thermal expansion of single-crystal KDP—**61**, 683A
low-temperature thermal properties of CdS—**61**, 683A
reflectance of CdS and ZnO single crystals—**61**, 683A
yttrium orthovanadate for polarizers—**61**, 684A
noncollinear phase matching in $LiNbO_3$—**61**, 904
natural garnets, optical absorption—**61**, 1325
Tl-doped KCl disks, uv fluorescence standards—**61**, 1422L
polarized-modulation Brillouin spectroscopy—**61**, 1424L
optical phonons in iron garnets—**61**, 1613

optically active

biaxial crystal optics—**61**, 49
electro-optic materials—**61**, 666A
optical anisotropy in cubic crystals—**61**, 1060
propagation through cholesteric liquid crystals—**61**, 1363
structure of field in dispersive medium—**61**, 1551A
second-order electro-optic dffect in diamond—**61**, 1618

Deconvolution

high-resolution observations of He II, 3204 Å—**16**, 123L
hfs of Rb resonance lines—**61**, 231
fast numerical processing of extended images—**61**, 657A
theory of derivative spectrometer, II.—**61**, 1269L

Detection

probability weighting of spatial filters—**61**, 478
photoelectron count distributions—**61**, 934
Progress in Optics VIII, Wolf, Ed.—**61**, 1124R

atmospheric attenuation

effect of turbulence on detection processes—**61**, 676A
solutions of lock-in detection problem—**61**, 1015

optical system

optimum signal detection in presence of noise—**61**, 657A
polarized-modulation Brillouin spectroscopy—**61**, 1424L

Detectors

infrared

. . . *Far-Infrared Spectroscopy*, Finch *et al.*—**61**, 277R
Infrared Spectroscopy, Stewart—**61**, 547R
10.6-μm laser space-communications system—**61**, 694A

photoelectric

recent developments in photomultipliers—**61**, 690A
dual photomultiplier for space instrumentation—**61**, 691A

spectral sensitivity

$ZnSe_{1-x}Te_x$ as visible radiation detector—**61**, 690A

ultraviolet

calibration in euv—**61**, 495
paraterphenyl as detector in euv—**61**, 1011

Dielectric layers

thickness and refractive indices of films—**61**, 1392

Diffraction

diffraction studies—**61**, 1575A
diameter of small luminous disk—**61**, 1579A
diffraction by two long, thin strips—**61**, 1585A

devices

numerical analysis of diffraction gratings—**61**, 43
hardened dichromated-gelatin films—**61**, 199
diffraction-based merit function—**61**, 302
far-field pattern of corner reflectors—**61**. 431
anomalous behavior of thin-wire gratings—**61**, 450
phase-only complex-valued spatial filter—**61**, 1023
derivation of diffraction from dispersion—**61**, 1029
efficiency of photochromic gratings—**61**, 1202
Bragg-diffraction sampling of sound field—**61**, 1572A
diffractogram as data record—**61**, 1579A
diffractographic dynamometer—**61**, 1584A
diffractographic profile measurement—**61**, 1584A
apodizers in partially coherent light—**61**, 1585A

measurement

resolution in partially coherent illumination—**61**, 870
closely spaced circular apertures—**61**, 1685A

theory

irradiance from truncated gaussian field—**61**, 31
Optics, Klein—**61**, 277R
half-wave filter on portion of perfect lens—**61**, 297
parametric interaction between three beams—**61**, 320
States, Waves and Photons, Simmons, Guttmann—**61**, 422R
boundary-diffraction-wave theory—**61**, 439
displacement of beam at dielectric interface—**61**, 586
displacement at multilayered structures—**61**, 667A/1397
diffraction of slits of wavelength dimensions—**61**, 686A
diffraction by circular opaque grains—**61**, 692A
Vibrations Lumineuses, Françon—**61**, 838R
· · · *Meteorological Optics*, Tricker—**61**, 1270R
diffraction in uniaxially antisotropic media—**61**, 1477
far-field diffraction by semi-infinite plane—**61**, 1487
diffracted fields—**61**, 1576A
Fresnel field distributions—**61**, 1578A
diffraction by stratified gratings—**61**, 1578A

angular spectrum inverse diffraction—61, 1578A
boundary-diffraction waves, off-axis sources—61, 1584A
Kirchhoff and Rayleigh–Sommerfeld theories—61, 1584A
uniform asymptotic description of beam modes—61, 1699

holograms

characterizing hologram-recording materials—61, 203
holographic recording with photopolymers—61, 281E
imaging with electromagnetic holograms—61, 789
superresolution of red-blood-cell holograms—61, 991
theory of holographic diffraction gratings—61, 1001

Dispersion

inhomogeneous lenses, aberrations—61, 777, 1495

materials

of carbon dioxide—61, 89
electro-optic effect in $BaTiO_3$—61, 679A
oscillator strength estimates of NO—61, 1587A
second-order electro-optic effect in diamond—61, 1618

theory

derivation of diffraction from dispersion—61, 1029

Distortion

of 2-prism anamorphic system—61, 685A
by Fresnel and conventional prisms—61, 686A
single-point-reference interferometer—61, 687A

Doppler effect

moving mirror in dispersive dielectric medium—61, 670A
for moving instruments—61, 1585A

Dysprosium

preliminary level analysis of Dy I and Dy II—61, 704
$4f^{N-1}6s^26p$, Gd I, Dy I, Er I, Yb I—61, 1350
isotope shifts of Dy I and Er I—61, 1590A

Electro-optic effect

electro-optic materials—61, 666A
electro-optic effect in $BaTiO_3$—61, 679A
electro-optic high-speed measuring microscope—61, 681A
second-order electro-optic effect in diamond—61, 1618
Coherent Light, Harvey—61, 1719R

Electroretinogram

theory of flicker: uniform fields—61, 537

Ellipsometry

optical properties of aggregated Ag films—61, 62, 463
ellipsometric liquid-immersion methods—61, 124L
handedness of polarization after reflection—61, 212
multiple-angle-of-incidence ellipsometry—61, 457
(011) W optical constants in visible region—61, 470
analyses of errors—61, 600, 773
elasto-optic effect in absorbing materials—61, 608
film–substrate problem in ellipsometry—61, 664A/1230
new ellipsometric method for thin films—61, 665A
error correction, alignment, birefringence—61, 1077
calibration of ellipsometer divided circles—61, 1118L
coherent scattering in ellipsometry—61, 1236
ellipsometry with imperfect components—61, 1380
ellipsometry of anisotropic films—61, 1460
epitaxial layer thickness measurement—61, 1583A
multiple-angle ellipsometry—61, 1622

Emission

room temperature and 77 K—61, 123L

Emissivity

anomalous emissivities of nickel and iron—61, 1607

Erbium

$4f^{N-1}6s^26p$, Gd I, Dy I, Er I, Yb I—61, 1350
isotope shifts of Dy I and Er I—61, 1590A

Errata—61, 136, 281, 423, 985, 1665

Europium

angular distribution of fluorescence—61, 673A

Fiber optics

statistical evaluation of fiber-optics imagery—61, 314
pulse distortion in fiber-optics bundle—61, 659A

Fibers

loss in clad glass fibers and bulk glass—61, 143
optical guided waves and integrated optics—61, 674A
coupling between two optical fibers—61, 678A
propagation in radially nonuniform media—61, 1492

Films

scattering from ultrathin free-liquid films—61, 76
ellipsometric liquid-immersion methods—61, 124L
phase-change correction of film thickness—61, 131L
thickness and optical constants of films—61, 351
probability weighting of spatial filters—61, 478
Optical Instruments, Techniques, Dickson, Ed.—61, 548R
elasto-optic effect in absorbing materials—61, 608
film-substrate problem in ellipsometry—61, 664A/1230
new ellipsometric method for thin films—61, 665A
film-thickness monitor—61, 665A
total scattered light from thin-film coatings—61, 665A
thin-film polarizer for the infrared—61, 665A
thickness and refractive indices—61, 1392
ellipsometry of anisotropic films—61, 1460
thin-film prototype designs—61, 1569A
transmittance of systems with absorbing films—61, 1569A
nonconventional thin-film filters—61, 1569A
apparent optical constants and their use—61, 1569A
deterioration of reflecting coatings—61, 1570A
monitoring thickness of MgF_2 and LiF films—61, 1570A
transmittance of tandem arrays of filters—61, 1570A
biaxially anisotropic thin-film layers—61, 1579A
multiple-angle ellipsometry—61, 1622

dielectric

optical guided-wave focusing and diffraction—61, 154
determining thin-film coating errors—61, 666A
optical guided waves and integrated optics—61, 674A
distributed coupling in planar waveguides—61, 676A
beam displacement and evanescent waves—61, 676A
prism–thin-film waveguide coupler—61, 677A
cylindrically guided waves—61, 677A
instrumentation applications of waveguides—61, 677A
guided-wave propagation at 10.6 μm—61, 677A
ion-bombarded quartz for integrated optics—61, 678A
transmittance of fused silica waveguides—61, 678A
measuring reflectance and transmittance—61, 681A
light guiding, optimum coupling—61, 1467
reflection by nonabsorbing isotropic film—61, 1630

evaporated

optical properties of evaporated Rh films—61, 360
reflectance of Re and W films in vuv—61, 665A
Progress in Optics VIII, Wolf, Ed.—61, 1124R
Thin Film Physics, Heavens—61, 1125R
single-wavelength thin-film polarizers—61, 1604

metallic

optical properties of aggregated Ag films—61, 62, 463
optical properties of Cs—61, 740

semiconductors

properties of amorphous Ge films—61, 1065

Filters

spectral

Far-Infrared Spectroscopy, Finch *et al.*—61, 277R
differentiation by coherent correlation—61, 474
limitations in use of interference filters—61, 672A
simple multiple-pass birefringent filter—61, 767
design of optical minus filters—61, 365, 844
single-wavelength thin-film polarizers—61, 1604

spatial

aberration compensation—61, 182
States, Waves and Photons, Simmons, Guttmann—61, 422R
spatial-frequency filter for color TV camera—61, 656A
visualization of large-variation phase objects—61, 656A
spatial filters made by multiple exposures—61, 663A
phase-only complex-valued spatial filter—61, 1023
statistical properties of optical fields—61, 1307
synthesis of optimum complex spatial filters—61, 1548A
novel spatial filter for photomask inspection—61, 1548A
bandpass spatial filtering—61, 1548A
nonlinear spatial-domain filtering—61, 1548A
modified diffraction patterns near focus—61, 1560A

Fluctuations of light

scattering from ultrathin free-liquid films—61, 76
log-amplitude variations of a laser beam—61, 641L
irradiance fluctuations of scattered laser—61, 691A/1301
photoelectron count distributions—61, 934
scintillation in maritime environment—61, 1064A

Fluorescence

Fluorescence Analysis, White, Argauer—61, 549R
Guide to Fluorescence Literature, 2, Passwater—61, 642R
spectroscopy of picosecond light pulses—61, 654A
angular distribution of fluorescence—61, 673A
fluorescence of mixed $CdSe_xSe_{1-x}$ crystals—61, 678A
of paraterphenyl in euv—61, 1011
spectra of Zr- and Di-activated phosphors—61, 1118L
luminosity and color rendering of white light—61, 1155
Tl-doped KCl disks, uv fluorescence standards—61, 1422L
Photophysics of Aromatic Molecules, Birks—61, 1431R
laser-induced fluorescence in foliage—61, 1557A
ultrashort fluorescence lifetimes—61, 1583A

Fourier transforms

spatial noise in optical data-storage systems—61, 386
Optical Instruments, Techniques, Dickson, Ed.—61, 548R
polychromic program for analysis of systems—61, 684A
transfer function from spread function—61, 684A
sampling-function effects in system evaluation—61, 684A
aberrations in Fourier-transform data storage—61, 915
phase-only complex-valued spatial filter—61, 1023
asymptotic expansions for transfer function—61, 1214
coherent optical computer for interferograms—61, 1355
roughness determination with laser speckle—61, 1425L
L'Intégrale de Fourier, 2nd., Duffieux—61, 1541R

Fourier spectroscopy

States, Waves and Photons, Simmons, Guttmann—61, 422R

holograms

effect of apertures in holography—61, 667A

Gadolinium

$4f^{N-1}6s^26p$ in Gd I, Dy I, Er I, Yb I—61, 1350

Garnet

optical phonons in iron garnets—61, 1613

Geometrical optics

complex rays, gaussian beams—61, 40/687A
quasi-geometric optics of inhomogeneous media—61, 161
generalized principal angle of incidence—61, 274L
Optics, Klein—61, 277R
remarkable field of geometrical optics—61, 290
States, Waves and Photons, Simmons, Guttmann—61, 422R
modes in gaussian optical systems—61, 446
Optics, Painting & Photography, Pirenne—61, 550R
displacement of beam at dielectric interface—61, 586
displacement at multilayered structures—61, 667A/1397
first-order approximation, mode coupling—61, 751
inhomogeneous lenses, paraxial optics—61, 879
lens design with continuously varying indices—61, 886
inhomogeneous lenses, aberrations—61, 1086, 1195, 1495
retinal cone as an ideal light collector—61, 1120L
Fourier analysis of imaging lenses—61, 1428L
propagation in radially nonuniform media—61, 1492
uniform asymptotic description of beam modes—61, 1699

Germanium

thin-film polarizer for the infrared—61, 665A
collision broadening, electroreflectance—61, 980L
properties of amorphous Ge films—61, 1065

Glass

diffuse transmittance of glass—61, 60
loss in clad glass fibers and bulk glass—61, 143
Proc. Eighth Congress on Glass 1—61, 550R
pitch-polishing rate parameters—61, 651A
computer-directed optical surfacing—61, 651A
Ge–Se–As glass and hot-pressed CdS—61, 682A
effect of temperature on index of glass—61, 682A
small expansion differences of glasses—61, 683A
thermal expansion in ULE lightweight mirrors—61, 683A
inhomogeneous lenses, chromatic aberration—61, 777
thermal-expansion differences—61, 1583A

Gold

optical constants of silver and gold in uv—61, 128L
uv absorption of gold colloids—61, 680A
energy-band structure of gold—61, 680A
wide-lorentzian-width Ar II and Ne II lines—61, 833L
precision wavelengths, atomic energy levels—61, 1342

Goniometry

particle-size distributions—61, 70

Gratings

numerical analysis of diffraction gratings—61, 43
optical guided-wave focusing and diffraction—61, 154
hardened dichromated-gelatin films—61, 199
polarization in ir grating instruments—61, 273L
holographic recording with photopolymers—61, 281E
generation of light from free electrons—61, 423E
anomalous behavior of thin-wire gratings—61, 450
Infrared Spectroscopy, Stewart—61, 547R
diagnostics for high-power lasers—61, 650A
spectroscopy of picosecond light pulses—61, 654A
analysis of multiple-hologram elements—61, 667A
holographic lens systems—61, 667A
optical guided waves and integrated optics—61, 674A
generalized grating ray-trace equations—61, 685A
orientational adaptation—61, 689A/1710
multislits with Boltzmann interferometers—61, 835L
theory of holographic diffraction gratings—61, 1001
effect of masking on contrast of gratings—61, 1172
efficiency of photochromic gratings—61, 1202
reversal in carrier-frequency photography—61, 1439
metallic gratings generated holographically—61, 1583A

Helium

high-resolution observations of He II, 3204 Å—61, 123L
pressure–wavelength dependence of He–Ne laser—61, 216
metastable transition probabilities—61, 332
Annual Rev. Astronomy 8, Goldberg, Ed.—61, 421R
beam-foil spectra of He and O, 200–600 Å—61, 653A

Holmium

analysis of contaminate deposits—61, 693A
spectra of neutral and singly ionized Ho—61, 1429L

Holography

Optics, Klein—61, 277R
holographic correlation and distortion—61, 663A
new technique for holographic multiplexing—61, 1240
holography without separate reference beam—61, 1555A

applications

differentiation by coherent correlation—61, 474
Uses of Holography, Robertson, Harvey, Eds.—61, 643R
flow visualization with holographic schlieren—61, 648A
holographic display of laser modes—61, 648A/1426L
high-resolution portable holocamera—61, 649A
testing aspherics with holography—61, 655A
measurement of curved particle tracks—61, 656A
holographic edge and gradient correlation—61, 657A
closed holograms and optical-channel capacity—61, 664A
acoustical-holography experiments—61, 666A
visible recording of 10.6-μm holograms—61, 667A
unaided viewing of stereo imagery—61, 667A
holographic lens systems—61, 667A
laser Doppler velocimeter—61, 680A
holographic strain determination—61, 688A
interferometric holography of air breakdown—61, 688A
superresolution of red-blood-cell holograms—61, 991
phase-only complex-valued spatial filter—61, 1023
Applications of Holography, Caulfield, Lu—61, 1125R
interferometry of nonsinusoidal vibrations—61, 1359
holography in photogrammetry and mapping—61, 1547A
holographic subtraction—61, 1559A
measurement of constant-velocity motion—61, 1571A
holographic imaging of concealed objects—61, 1571A
microwave holography of hollow shells—61, 1571A
holographic displays for architecture—61, 1572A
multiplexing ultrasonic wave fronts—61, 1573A
scanning laser acoustic microscope—61, 1573A
inverse problem of optical scattering—61, 1578A
holographic spectrometer—61, 1583A
metallic gratings generated holographically—61, 1583A

color

multicolor holographic storage and retrieval—61, 668A
new technique of color holography—61, 1554A

computer-synthesized

phase quantization in computer holograms—61, 657A
binary-intensity holograms—61, 910
time-average holographic fringes—61, 924/1571A

image characteristics

nomographs for holographic imaging—61, 126L
holographic-recording-noise reduction—61, 399
analysis of multiple-hologram elements—61, 667A
millimeter-wave holographic image conversion—61, 667A
real-time microwave holography—61, 667A
broad-band holographic reconstruction—61, 668A
tolerances in frozen-fringe holography—61, 784
electromagnetic holograms of arbitrary shape—61, 789
aberrations in Fourier-transform data storage—61, 915
efficiency of photochromic gratings—61, 1202
pseudoscopic effects, cue inversions—61, 1268L
reversal in carrier-frequency photography—61, 1439
interference patterns of hologram aberrations—61, 1539L
Interpretation Géometrique, Pelzer-Bawin *et al.*—61, 1542R
holograms with nonuniform and random bias—61, 1554A
holographic image accuracy—61, 1554A
hologram systems for broadband imaging—61, 1555A
unequal magnifications in holography—61, 1555A

interference

holographic multiple-beam interferometry—61, 176
double-exposure holographic interferograms—61, 1571A
holographic correlation interferometry—61, 1571A
interference fringes in holography—61, 1599

photographic problems

hardened dichromated-gelatin films—61, 199
characterizing hologram-recording materials—61, 203
holographic recording with photopolymers—61, 281E
noise characteristics of photographic emulsions—61, 402
silver halide materials in holography—61, 648A
new class of photochromic materials—61, 649A
dry photopolymer film for holograms—61, 649A
linear reconstruction from nonlinear holograms—61, 649A
granularity effects in phase holograms—61, 649A
fixing of photopolymer holograms—61, 649A/1116L
phase holograms in photochromic materials—61, 1553A
dye-induced stabilization of holograms—61, 1554A
diazo photosensitive materials—61, 1554A
diffraction efficiency of amplitude holograms—61, 1554A

theory

compact, nonredundant point arrays—61, 272L
superresolution by holography—61, 418L
long-wavelength holography by cross arrays—61, 666A
effect of apertures in holography—61, 667A
holographic model of visual perception—61, 690A
distribution of irradiance in a hologram—61, 929
carrier-frequency shift in holography—61, 998
theory of holographic diffraction gratings—61, 1001

Hydrogen

Lyman bands for intensity calibration—61, 495
Balmer-α excitation by electron impact—61, 1587A

Image formation

aberrations
interferometric removal of aberrations—61, 663A
aberrations in Fourier-transform data storage—61, 915
x-ray image formation—61, 1573A

atmospheric
seeing from high-altitude jet aircraft—61, 675A

devices
compact, nonredundant point arrays—61, 272L
statistical evaluation of fiber-optics imagery—61, 314
imaging properties of synthetic apertures—61, 657A
unaided viewing of stereo imagery—61, 667A
holographic lens systems—61, 667A
human-vision constraints of ir imaging—61, 791A
speckle removal by slowly moving diffuser—61, 847
imaging with spectral density functions—61, 865
phase-only complex valued spatial filter—61, 1023
reversal in carrier-frequency photography—61, 1439,
image recording using thickness modulation—61, 1548A
versatility of carrier-frequency photography—61, 1548A
pseudocolor biomedical image enhancement—61, 1573A
image reconstruction from correlation—61, 1589A

diffraction
diffraction-based merit function—61, 302

eye
theoretical eye model with aspherics—61, 1522

holograms
nomographs for holographic imaging—61, 126L
holographic-recording-noise reduction—61, 399
closed holograms and optical-channel capacity—61, 664A
curved electromagnetic holograms—61, 789
binary-intensity holograms—61, 910

restoration
fast numerical processing of extended images—61, 657A
restoring with maximum likelihood—61, 657A
data compression and enhancement—61, 662A
effect of linear smear on photographic images—61, 859
atmospheric image-restoration experiments—61, 1549A
spatial noise in optical data-storage systems—61, 386

sharpness
image structure and visual sharpness—61, 664A
single-sideband imaging—61, 1555A
line spread function in image evaluation—61, 1567A

theory
propagation of structural information—61, 15
coherence and degrees of freedom of an image—61, 36
States, Waves and Photons, Simmons, Guttmann—61, 422R
differentiation by coherent correlation—61, 474
properties of granularity Wiener spectra—61, 524
correlation with magnification and rotation—61, 985E
digital image processing—61, 1548A
Nature of Light, Ronchi—61, 1717R

Information processing

Vectograph technique for optical processing—61, 662A
data compression and enhancement—61, 662A
holographic correlation and distortion—61, 663A
optical correlation of two-phase micrographs—61, 663A
optical processing in reflected light—61, 664A
image structure and visual sharpness—61, 664A
closed holograms and optical-channel capacity—61, 664A

Information theory

propagation of structural information—61, 15
coherence and degrees of freedom of an image—61, 36
information rate in communication channel—61, 191
information in a photon beam—61, 328
holographic-recording-noise reduction—61, 399
properties of granularity Wiener spectra—61, 524
photoelectron count distributions—61, 934

Infrared

Far-Infrared Techniques, Kimmitt—61, 278R
electron–phonon interaction using lasers—61, 679A

applications
ir instrumentation for astronomy—61, 681A
human-vision constraints of ir imaging—61, 691A

atmospheric optics
angular scattering of 10.6-μm radiation by fog—61, 671A
attenuation of solar radiation by clouds—61, 671A
attenuation by fogs between 2.3 and 3.6 μm—61, 672A
spectrometer for astronomical observations—61, 687A
atmospheric image-restoration experiments—61, 1549A
parametric oscillators and tunable filters—61, 1558A

devices
polarization in grating instruments—61, 273L
coronagraph mirrors for near ir—61, 665A
thin-film polarizer for the infrared—61, 665A
visible recording of 10.6-μm holograms—61, 667A
silicon reflection polarizer—61, 832L
multislits with Boltzmann interferometers—61, 835L
picosecond streak camera—61, 1583A
epitaxial-layer-thickness measurement—61, 1583A

properties of materials
lattice spectra of rare-earth pyrochlores—61, 209
refractive indices of alkali halides—61, 275L
long-wavelength infrared materials—61, 651A
effect of atmosphere on ir reflectance—61, 664A
absorption coefficients of water in ir—61, 673A/1316
fringe spectra and refractive index—61, 679A
properties of ir-transmitting materials—61, 681A
optical constants of water—61, 895
absorption spectra of impurities in garnets—61, 1325
thermal expansion of materials to 250°C—61, 1550A
temperature-dependent photoconductivity—61, 1556A

spectra
first spectra of Cl, Br, I in 4-μm region—61, 110
Far-Infrared Spectroscopy, Finch *et al.*—61, 277R
absorption by CO_2 between 1100 and 1835 cm^{-1}—61, 499
Infrared Spectroscopy, Stewart—61, 547R
line shifts in first overtone of DF—61, 573
resonance lines of La III—61, 1427L
Far-Infrared Spectroscopy, Möller, Rothschild—61, 1542R

Inhomogeneous media

quasigeometric optics of inhomogeneous media—61, 161
optical-pulse propagation in turbulent medium—61, 256
wave propagation in stratified media—61, 308
modes in gaussian optical systems—61, 446
distance dependence of phase structure function—61, 488
amplitude fluctuations of a laser beam—61, 641L
nonlinear optics of ferroelectric $PbTiO_3$—61, 669A
laser beams in air-blooming wind prisms—61, 669A
analytic solution of skew rays in GRIN rods—61, 685A
Moliere approximation for wave propagation—61, 797
scattering from inhomogeneous lenses—61, 876

inhomogeneous lenses, paraxial optics—61, 879
lens design with continuously varying indices—61, 886
derivation of diffraction from dispersion—61, 1029
beam propagation in a random medium—61, 1044
second moment of a wave in a random medium—61, 1051
inhomogeneous lenses, aberrations—61, 1086, 1195, 1495
phase variations in atmospheric propagation—61, 1279
spherical wave propagating through turbulence—61, 1285
inhomogeneous toroidal open resonators—61, 1443
propagation in radially nonuniform media—61, 1492
propagation in turbulent medium—61, 1551A
modes in helical gas lenses—61, 1580A
sine-wave paths in gradient-index media—61, 1715L

coherence properties

aberration compensation—61, 182
propagation of mutual coherence—61, 236
propagation of coherence in random medium—61, 248, 369
mutual coherence of wave in atmosphere—61, 482

Interference

Light from Descartes to Newton, Sabra—61, 133R
design of optical minus filters—61, 365, 844
limitations in use of interference filters—61, 672A
fringe spectra and refractive index—61, 679A
Vibrations Lumineuses, Françon—61, 838R
phase-shift measurements by—61, 1035
phase shifts of TE and TM evanescent waves—61, 1423L
multiple-beam interference fringes—61, 1561A
interferometric diffraction suppression—61, 1585A
fringe-parameter estimation—61, 1589A
interference fringes in holography—61, 1599
single-wavelength thin-film polarizers—61, 1604

Interferometer

neutral-reference-beam shear interferometer—61, 172
distance dependence of phase structure function—61, 488
Infrared Spectroscopy, Stewart—61, 547R
holographic display of laser modes—61, 648A/1426L
saturable absorber in Fabry–Perot—61, 650A
direct phase-sensing interferometer—61, 655A
moiré phase-measuring interferometer—61, 655A
Optical Sciences test tower—61, 656A
saturable resonator for visible light—61, 669A
frequency shift of Xe 3.5-μm line—61, 673A
phase-front deformation of laser beams—61, 675A
optical autocorrelator for MTF measurement—61, 687A
single-point-reference interferometer—61, 687A
spectrometer for astronomical observations—61, 687A
Talbot interferometer—61, 687A
multislits with Boltzmann interferometers—61, 835L
stabilization with resonant reflector—61, 1117L
multiplex Fabry–Perot interferometer—61, 1560A
double-reference interference comparator—61, 1560A

Interferometry

first spark spectrum of arsenic—61, 96
phase-change correction of film thickness—61, 131L
constant-radial-displacement interferometry—61, 169
holographic multiple-beam interferometry—61, 176
Optics, Klein—61, 277R
Uses of Holography, Robertson, Harvey, Eds.—61, 643R
microripple of finished optics—61, 652A
testing aspherics with holography—61, 655A
null-lens mapping errors—61, 655A
interferometric removal of aberrations—61, 663A
ir instrumentation for astronomy—61, 681A
radio interferometry at 0″.001 arc resolution—61, 682A
laser-speckle interferometry—61, 687A
holographic strain determination—61, 688A
interferometric holography of air breakdown—61, 688A
tolerances in frozen-fringe holography—61, 784
wide-lorentzian-width Ar II and Ne II lines—61, 833L
Vibrations Lumineuses, Françon—61, 838R
time-average holographic fringes—61, 924/1571A
Applications of Holography, Caulfield, Lu—61, 1125R
new Fabry–Perot method for periodic spectra—61, 1246
coherent optical computer for interferograms—61, 1355
interferometry of nonsinusoidal vibrations—61, 1359
observations of kinetic cooling—61, 1550A
Doppler-shift compensation of rotating sources—61, 1560A
modular interferogram program system—61, 1586A
fabrication and test of 1.2-m $f/2$ parabola—61, 1586A
interference fringes in holography—61, 1599

Iodine

first spectra of Cl, Br, I in 4-μm region—61, 110
hyperfine structures in molecular iodine—61, 1574A

Iron

isoelectronic spectra with Na I, Mg I—61, 91
oscillator strengths for Fe III—61, 271L
absorption bands in natural garnets—61, 1325
absorption spectra of highly ionized iron—61, 1591A
anomalous emissivities of nickel and iron—61, 1607
optical phonons in iron garnets—61, 1613

Kerr effect

ultrahigh-speed photography of light in flight—61, 654A
chirped pulses in lasers and amplifiers—61, 659A

Krypton

oscillator strengths of resonance lines—61, 136E
charge-state identification of spectral lines—61, 653A

Lamps

luminosity and color rendering of white light—61, 1155

Lanthanum

resonance lines of La III—61, 1427L
triply ionized lanthanum—61, 1590A

Lanthanides

transition from L-S to J-j in lanthanons—61, 672A
configurations of lanthanides and actinides—61, 1101
energy differences for lanthanides, actinides—61, 1112
configurations for lanthanides and actinides—61, 1590A
energy levels of electronic configurations—61, 1666
two spectroscopic systems in lanthanide atoms—61, 1682

Lasers

YAlG:Nd^{3+}—61, 123L
pressure–wavelength dependence of He–Ne laser—61, 216
Optics, Klein—61, 277R
helium metastable transition probabilities—61, 332
ir laser transitions, O I and S I—61, 415L
Laser Fundamentals, Van Pelt *et al.*—61, 547R
self-giant-pulsed operation of lasers—61, 650A
saturation in Stark modulation of CO_2 laser—61, 651A
pulsed-electrical-discharge CO lasers—61, 659A
vacuum-ultraviolet laser emission—61, 659A
frequency shift of Xe 3.5-μm line—61, 673A
observation of electron–phonon interaction—61, 679A
fluctuations of single-mode 10.6-μm laser—61, 691A
birefringence of YAG:Nd laser rods—61, 758

Eye Injuries, Zagora—61, 837R
speckle removal by slowly moving diffuser—61, 847
... Isoperibol Laser Calorimetry, West—61, 984R
Laser Physics, Maitland and Dunn—61, 984R
stabilization with resonant reflector—61, 1117L
transversely excited atmospheric CO_2 lasers—61, 1557A
review of dye lasers—61, 1561A
tunable multiple-wavelength organic dye laser—61, 1564A
electronically tunable dye laser—61, 1564A
large-diameter solid and cored Nd:YAG lasers—61, 1564A
output coupling for high-gain YAG:Nd^{3+} laser—61, 1564A
frequency-doubled YAG:Nd^{3+} laser—61, 1565A
statistical method for calculating absorption—61, 1565A
measurements of stabilized laser wavelengths—61, 1565A
lensing effects in helical TEA-CO_2 lasers—61, 1565A
gain dynamics in water vapor-helium laser—61, 1565A
Lasers, 2nd ed., Lengyel—61, 1720R
Stark-effect modulated Q switching of laser—61, 1565A

applications

infrared propagation, 10.6 μm—61, 12
scattering from ultrathin free-liquid films—61, 76
efficient Kerr cell for use in uv—61, 131L
Optical Instruments, Techniques, Dickson, Ed.—61, 548R
Seeing Beyond the Visible, Hewish, Ed.—61, 548R
granular radiance distribution of a diffuser—61, 559
vibration analysis using laser speckle—61, 566
holographic display of laser modes—61, 648A/1426L
high-resolution portable holocamera—61, 649A
diagnostics for high-power lasers—61, 650A
saturable absorber in Fabry–Perot—61, 650A
device for testing large optical surfaces—61, 655A
imaging properties of synthetic apertures—61, 657A
theory of noise amplifiers—61, 659A
high-intensity resonance on $CaF_2:H^-$—61, 680A
laser Doppler velocimeter—61, 680A
organic-dye-laser spectrometer—61, 680A
image-position sensor for optical tracking—61, 681A
electro-optic high-speed measuring microscope—61, 681A
interferometric holography of air breakdown—61, 688A
irradiance fluctuations of scattered laser—61, 691A/1301
laser-ranging system at McDonald Observatory—61, 692A
10.6-μm laser space-communications system—61, 693A
detection of absorption by quenching—61, 746
carrier-frequency shift in holography—61, 998
infrared mirror-scatter measurements—61, 1225
roughness determination with laser speckle—61, 1425L
high-peak-power lasers—61, 1558A
image amplification by dye lasers—61, 1562A
homodyned aperture synthesis—61, 1572A
scanning-laser acoustic microscope—61, 1573A
absorption-line parameters—61, 1587A
surface-height power spectral density—61, 1589A
Stark effect in CH_3Cl and Q switching—61, 1660

beams

complex rays, application to gaussian beams—61, 40/687A
propagation through the atmosphere—61, 641L
conservation laws and pulse propagation—61, 658A
pulse distortion in fiber-optics bundle—61, 659A
chirped pulses in lasers and amplifiers—61, 659A
thermal blooming of a pulsed-laser radiation—61, 670A
propagation of light pulses through clouds—61, 670A
moving mirror in dispersive dielectric medium—61, 670A
angular scattering of 10.6-μm radiation by fog—61, 671A
for-droplet vaporization by 10.6-μm laser pulse—61, 671A
propagation of 10.6-μm laser beams—61, 674A
phase-front deformation of laser beams—61, 675A
laser-propagation averaging times—61, 675A
laser beams propagating through turbulence—61, 675A
measuring laser-beam direction fluctuations—61, 676A
atmospheric-turbulence profile in troposphere—61, 676A
guided-wave propagation at 10.6 μm—61, 677A
proposal for an optical limiter—61, 691A
saturation of fluctuations by turbulence—61, 675A
beam propagation in a random medium—61, 1044
scintillation in maritime environment—61, 1064A
airborne optical communications—61, 1550A
beam distortion in laser propagation—61, 1552A
laser propagation averaging times—61, 1553A
self-focusing in laser-produced plasmas—61, 1558A

coherence

laser-speckle interferometry—61, 687A
Coherent Light, Harvey—61, 1719R

Raman scattering

high-resolution Raman spectroscopy of gases—61, 977L
argon-ion excitation of gas Raman spectra—61, 1246
Laser Raman Spectroscopy, Tobin—61, 1719R

theory

irradiance from truncated gaussian field—61, 31
Laser Theory, Haken (Handb. Phys. XXV)—61, 133R
quasi-geometric optics of inhomogeneous media—61, 161
properties of absorbing and active cylinders—61, 577
CO_2 laser signatures—61, 650A
multimode-laser operation—61, 650A
fields exhibiting transverse dependence—61, 651A
effect of drift and diffusion of states—61, 658A
optical-broad-band amplifier—61, 658A
stimulated emission in a periodic structure—61, 658A
stimulated emission—61, 660A
theory of a two-photon laser amplifier—61, 669A
resonators, mode coupling—61, 751
Progress in Optics VIII, Wolf, Ed.—61, 1124R
statistical properties of optical fields—61, 1307
selective depopulation of Cs $6^2S_{\frac{1}{2}}(F=3)$ level—61, 1455
laser boundary-value problems—61, 1577A
total reflection of matter waves—61, 1640
uniform asymptotic description of beam modes—61, 1699

Lens design

remarkable field of geometrical optics—61, 290
half-wave filter on portion of perfect lens—61, 297
diffraction-based merit function—61, 302
Quadrupoles in Electron Lens Design, Hawkes—61, 421R
computer-directed optical surfacing—61, 651A
convolution model for optical surfacing—61, 652A
surfacing of general aspherics—61, 652A
some experiments in optical design—61, 660A
orthonormality in least-squares optimization—61, 660A
experiment with the STOE program—61, 660A
spline representation of aspheric surfaces—61, 661A
MTF-based merit function for lens design—61, 662A
lens systems for xerographic copy machine—61, 662A
deviation as method of tolerancing singlets—61, 662A
generalized ray tracing—61, 685A
optics of a pincushion lens—61, 685A
high-resolution imagery with Fresnel optics—61, 686A
inhomogeneous lens, chromatic aberrations—61, 777, 1495
inhomogeneous lenses, paraxial optics—61, 879
lens design with continuously varying indices—61, 886
Lens Aberration Data, Palmer—61, 1123R
3rd-order aberrations of inhomogeneous lenses—61, 1195
choice of glasses for super achromats—61, 1566A
treatment of thick lens in Delano diagram—61, 1566A
sum-of-squares minimization under constraints—61, 1566A
$f/3$ focal reducer for newtonian telescope—61, 1567A

asymmetric surface in illuminator design—61, 1580A
night-vision magnifier eyepiece analysis—61, 1581A
microelectronic lenses—61, 1581A

Lithium

term splittings for lithium-like ions—64, 335
alignment of ^{7}Li atom by collisions—61, 653A

Luminescence

Proc. Conf. Luminescence, Williams, Ed.—61, 135R
Solid State Spectroscopy, Frisch, Ed.—61, 643R
multicolor holographic storage and retrieval—61, 668A

Lutetium

one-electron spectrum of Lu III—61, 1693

Magnesium

boron-like spectra: Mg VIII, Al IX, Si X—61, 504
absolute oscillator strengths—61, 938

Magneto-optic effect

magneto-optic inputs in data processing—61, 378
magneto-active plasmas, liquids, crystals—61, 1373

Manganese

new energy levels of Mn III—61, 732

Mercury

Hg resonance in low-pressure discharge—61, 1451

Metrology

precision measurement, constants—61, 281TN
microripple of finished optics—61, 652A
direct phase-sensing interferometer—61, 655A
usage of SI units—61, 699
International Units (SI), Page, Vigoureux, Eds.—61, 984R
interference fringes in holography—61, 1599

Microdensitometer

partially coherent imaging—61, 687A
linear microdensitometry—61, 1263L
conditions for microdensitometer linearity—61, 1588A

Microscopy

Optical Microscopy of Metals, Gifkins—61, 642R
electro-optic high-speed measuring microscope—61, 681A
partially coherent illumination and resolution—61, 687A
Progress in Optics VIII, Wolf, Ed.—61, 1124R
study of biological structure—61, 1563A
scanning-laser acoustic microscope—61, 1573A
optimal magnification in visual microscopy—61, 1575A

by wave-front reconstruction

superresolution of red-blood-cell holograms—61, 991

Microwaves

Seeing Beyond the Visible, Hewish, Ed.—61, 548R
millimeter-wave holographic image conversion—61, 667A
real-time microwave holography—61, 667A
polarization-recording holograms—61, 789
slope and curvature of wind-disturbed water—61, 852
far-field diffraction by semi-infinite plane—61, 1487

Mirrors

remarkable field of geometrical optics—61, 290
mushroom-shaped parabolic mirrors—61, 652A
tolerance analysis of high-acuity lenses—61, 654A
aspheric mirrors and collimated lenses—61, 654A
moiré phase-measuring interferometer—61, 655A
null-lens mapping errors—61, 655A
Hartmann test of aspherical mirrors—61, 655A
high-precision penta-mirror assemblies—61, 655A
Optical Sciences test tower—61, 656A
effect of atmosphere on ir reflectance—61, 664A
reflectance of Re and W films in vuv—61, 665A
coronagraph mirrors for near ir—61, 665A
Kitt Peak and Cerro Tololo 4-m telescopes—61, 682A
thermal expansion in ULE lightweight mifrors—61, 683A
directionally cast Al mirror substrates—61, 684A
reflectance of bombarded polished metals—61, 693A
control of figure of 75-cm deformable mirror—61, 693A
shell-theory deflection of optical mirrors—61, 693A
elastic deformation of lightweight mirrors—61, 693A
methods for determining mirror deformations—61, 693A
effect of fused seal planes on strength—61, 1550A
reflaxicon, a reflective optical element—61, 1581A
testing large astronomical mirrors—61, 1586A
fabrication and test of 1.2-m $f/2$ parabola—61, 1586A
MTF of segmented-mirror systems—61, 1586A

Modulation of beams

saturation in Stark modulation of CO_2 laser—61, 651A
guided-wave propagation at 10.6 μm—61, 677A
photoelectron count distributions—61, 934
total reflection of matter waves—61, 1640
phase modulation of light by ultrasonic waves—61, 1715L

Modulation transfer

remarkable field of geometrical optics—61, 290
Infrared Spectroscopy, Stewart—61, 547R
MTF-based merit function for lens design—61, 662A

eye

theory of flicker: uniform fields—61, 537

measurement

optical autocorrelator for MTF measurement—61, 687A

systems

proposed criterion for system quality—61, 654A
moiré phase-measuring interferometer—61, 655A
polychromic program for analysis of systems—61, 684A
transfer function from spread function—61, 684A
sampling-function effects in system evaluation—61, 684A
effect of masking on contrast of gratings—61, 1172
theory of derivative spectrometer, II.—61, 1269L
Fourier analysis of imaging lenses—61, 1428L
MTF of segmented-mirror systems—61, 1586A

theory

imaging with spectral density functions—61, 865
asymptotic expansions for transfer function—61, 1214
L'Intégrale de Fourier, 2nd ed., Duffieux—61, 1541R

Moiré patterns

moiré phase-measuring interferometer—61, 655A
interference fringes in holography—61, 1599

Molybdenum

classification of transitions in euv spectra—61, 508

Monochromators

calibration by branching-ratio technique—61, 83
Raman-scattering cross sections of liquids—61, 347

Necrology

Elliot Q. Adams—61, 985
Rudolf Amann—61, 1125
Edward Griffith Fleming Arnott—61, 1543
Charles Bittinger—61, 645
Francis Chapin Breckenridge—61, 1721
John P. Cahill—61, 1432, 1665E
Richard Guthrie Clarke—61, 1125
G. L. Erikson—61, 279
Paul Darwin Foote—61, 1436
Clarence Henry Graham—61, 1544
Frederick R. Hirsh, Jr.—61, 1543
Alexander Marjoros—61, 551
Sir Thomas Ralph Merton—61, 1272
Carleton C. Murdock—61, 1721
David Penney—61, 1432
Chandrasekhara Venkata Raman—61, 140
Anthony J. Theriault—61, 1432
Edgar D. Tillyer—61, 644
Thomas J. Walter—61, 1432, 1665E

Neodymium

branching ratios in YAlG—61, 123L
spectra of Zr- and Di-activated phosphors—61, 1118L
analysis of Nd I and Nd II—61, 1335

Neon

low-energy foil-excited spectra—61, 129L
pressure–wavelength dependence of He–Ne laser—61, 216
g values by beam-foil technique—61, 653A
wide-lorentzian-width Ar II and Ne II lines—61, 833L
Ne II far-vuv wavelengths—61, 1591A
cascade in atomic-transition probability—61, 1656

Nickel

isoelectronic spectra with Na I, Mg I—61, 91
anomalous emissivities of nickel and iron—61, 1607

Niobium

classification of transitions in euv spectra—61, 508
$4p^3$–$4p^35s$ transitions in Nb IX—61, 1264L

Nitrogen

LBH bands for intensity calibration—61, 495
radiative lifetimes using beams on He—61, 619
euv spectrum of N IV—61, 625
charge-state identification of spectral lines—61, 653A
g values by beam-foil technique—61, 653A
beam-foil studies of nitrogen—61, 947
short-duration afterglow—61, 1092
excitation of molecular spectrum—61, 1098

Nonlinear optics

parametric interaction between three beams—61, 320
light propagation in a nonlinear medium—61, 668A
nonlinear optics of ferroelectric $PbTiO_3$—61, 669A
angle-tuned parametric oscillators—61, 669A
laser beams in air-blooming wind prisms—61, 669A
theory of a two-photon laser amplifier—61, 669A
saturable resonator for visible light—61, 669A
thermal blooming of a pulsed-laser radiation—61, 670A
self-focusing of elliptically polarized beams—61, 670A
self-focusing of focused beams—61, 670A
moving mirror in dispersive dielectric medium—61, 670A
noncollinear phase matching in $LiNbO_3$—61, 904
uncertainty principle and nonlinear optics—61, 1561A
surface generation of second-harmonic light—61, 1561A
Coherent Light, Harvey—61, 1719R

Oceanography

In-Water Photography, Mertens—61, 551R
light absorption at thermocline—61, 831L
microstructure of air–sea interface—61, 852
Electromagnetics of the Sea, AGARD—61, 985R
Mie scattering for low-index hydrosols—61, 1549A

Optical data processing

magneto-optic inputs in data processing—61, 378
photochromic glass in optical processing—61, 1554A
biomedical image processing—61, 1573A
processing of synthetic-aperture images—61, 1558A
image processing in synthetic-aperture systems—61, 1558A
computer as an optical element—61, 1563A
computer enhancement of biomedical images—61, 1563A
computer application in optical microscopy—61, 1563A
angiographic subtraction by digital means—61, 1572A
objective cell-image description—61, 1572A

Optical Society

officers, 1970—61, 139
Honorary Member—61, 139
Ives Medal, 1970, Hopkins—61, 287
Richardson Medal, 1971, Cooke—61, 839
Medalists—61, 843, 1275
Research & Education Office—61, 844, 987, 1129
committees, 1971—61, 1126
Bylaws, revision—61, 1129
program, Spring meeting—61, 649, 1129
Mees Medal Award, Toraldo di Francia—61, 1272
Ives Medal, 1971, Turner—61, 1275
Meggers Award, 1971, Shenstone—61, 1275
Tillyer Medal, 1971, Sloan—61, 1275
program, 1971 Annual meeting—61, 1547

Optical systems

constant-radial-displacement interferometry—61, 169
remarkable field of geometrical optics—61, 290
Infrared Spectroscopy, Stewart—61, 547R
systems concepts applied to ellipsometry—61, 600, 773
computer-directed optical surfacing—61, 651A
mushroom-shaped parabolic mirrors—61, 652A
convolution model for optical surfacing—61, 652A
surfacing of general aspherics—61, 652A
microripple of finished optics—61, 652A
instrumentation applications of waveguides—61, 677A
scattering in nematic liquid crystals—61, 678A
liquid-crystal viewing screen—61, 678A
wide-angle, high-resolution scanner—61, 692A
spectrophotometer aboard Nimbus IV satellite—61, 692A
nonorthogonal, mode coupling—61, 751
correlation with magnification and rotation—61, 985E
ellipsometry with imperfect components—61, 1380
fabrication of aspherics—61, 1586A

design

diffraction-based merit function—61, 302
spectral analysis using extended aperture—61, 657A
tilted-component telescopes—61, 661A
unobstructed-aperture Cassegrain telescopes—61, 661A
use of normalized Delano diagram—61, 661A
pupil aberration: a design limitation—61, 661A
lens systems for xerographic copy machine—61, 662A
deviation as method of tolerancing singlets—61, 662A
glancing-incidence nested x-ray telescopes—61, 662A
optical processing in reflected light—61, 664A
image-position sensor for optical tracking—61, 681A
vectorial representation of Delano diagram—61, 685A

prism–film coupler, optimum design—61, 1467
liquid crystals for optical processing—61, 1559A
large optical memories—61, 1559A
apodization of large optical systems—61, 1566A
simulation of solar concentrators—61, 1566A
remote viewing system—61, 1577A
lateral photoelectric detector—61, 1581A
Schupmann medial telescope—61, 1581A
ocular fundus reflectometer—61, 1583A

performance
spatial noise in optical data-storage systems—61, 386
Cassegrain-type solid catadioptric objectives—61, 661A
image quality in telescopes—61, 661A
distortion of 2-prism anamorphic system—61, 685A
deformation of a wave front by flat plate—61, 685A
distortion by Fresnel and conventional prisms—61, 686A
high-resolution imagery with Fresnel optics—61, 688A
electric field at image of optical system—61, 694A
inhomogeneous lenses, aberrations—61, 777, 1495
liquid-crystal velocimeter—61, 1551A
night-vision pocketscope—61, 1557A
photoconductor light-gated liquid crystals—61, 1559A
dispersive optical systems—61, 1559A
influence of thermal gradients—61, 1580A

test methods
proposed criterion for system quality—61, 654A
aspheric mirrors and collimated lenses—61, 654A
tolerance analysis of high-acuity lenses—61, 654A
testing aspherics with holography—61, 655A
moiré phase-measuring interferometer—61, 655A
null-lens mapping errors—61, 655A
device for testing large optical surfaces—61, 655A
surface measurements by scanning pentaprism—61, 655A
Optical Sciences test tower—61, 656A
lenticular Hartmenn screen—61, 656A
polychromic program for analysis of systems—61, 848A
signal-to-noise ratio of image intensifiers—61, 1557A
synthetic-aperture-segment misalignments—61, 1559A
static ir attitude sensor for spacecraft—61, 1583A

Optical transfer function
diffraction-based merit function—61, 302
Optical Instruments, Techniques, Dickson, Ed.—61, 548R
effect of linear smear on photographic images—61, 859
imaging with spectral-density functions—61, 865
asymptotic expansions for transfer function—61, 1214
L'Intégrale de Fourier, 2nd ed., Duffieux—61, 1541R

Optics
John Pecham and Optics, Lindberg, Ed.—61, 278R
Optics, Painting & Photography, Pirenne—61, 550R
employment opportunities for the future—61, 686T

Oxygen
O I and S I, ir laser transitions—61, 415L
assignments and mean lives for O II, O III—61, 515
mean lives of excited levels in O I–O VI—61, 519
beam-foil spectra of He and O, 200–600 Å—61, 653A

Personalia
Robert M. Boynton—61, 1271
John Lott Brown—61, 1272
Frank Cooke—61, 839
Dennis Gabor—61, 1709
Gerhard Herzberg—61, 1709
Robert E. Hopkins—61, 287
Donald H. Kelly—61, 1272
Norman Macbeth—61, 1271
Calvin S. McCamy—61, 840
Robert P. Madden—61, 279
Dorothy Nickerson—61, 423
John A. Sanderson—61, 844
Allen G. Shenstone—61, 1275
Louise L. Sloan—61, 1275
Giuliano Toraldo di Francia—61 1272
Charles H. Townes—61, 139
A. Francis Turner—61, 1275

Phosphorescence
spectra of Zr- and Di-activated phosphors—61, 1118L

Phosphors
luminosity and color rendering of white light—61, 1155

Photoconductivity
Proc. 3rd Conf. Photoconductivity, Pell, Ed.—61, 1718R

Photoelasticity
Holographie, Pelzer-Bawin, de Lamotte—61, 1542R

Photoelectric yield
properties of amorphous Ge films—61, 1065

Photographic emulsions
photographic emulsions for holography—61, 402
silver halide materials in holography—61, 648A
crowded emulsions: granularity theory—61, 691A/800
reversal in carrier-frequency photography—61, 1439

Photography
properties of granularity Wiener spectra—61, 524
In-Water Photography, Mertens—61, 551R
Optical Microscopy of Metals, Gifkins—61, 642R
ultrahigh-speed photography of light in flight—61, 654A
tolerance analysis of high-acuity lenses—61, 654A
Vectograph technique for optical processing—61, 662A
fog-droplet vaporization by 10.6-μm laser pulse—61, 671A
size determination of ice crystals—61, 671A

color
pseudocolor biomedical image enhancement—61, 1573A

graininess
optimum signal detection in presence of noise—61, 657A

holography
new class of photochromic materials—61, 649A
dry photopolymer film for holograms—61, 649A
granularity effects in phase holograms—61, 649A
measurement of curved particle tracks—61, 656A
bleached photographic material—61, 1551A

resolution, and MTF
diffraction of slits of wavelength dimensions—61, 686A
effect of linear smear on photographic images—61, 859
optics in photogrammetry—61, 1547A
picosecond streak camera—61, 1583A

sensitometric characteristics
optical techniques in micro-electronics—61, 648A
Photochemistry, Wayne—61, 1432R
reversal in carrier-frequency photography—61, 1439

Photoionization

cross section of C I continuum—61, 223

Photometry

International Lighting Vocabulary, 3rd ed.,—61, 137TN
Principles of Light Measurement, CIE—61, 137TN
Appearance of Metallic Surfaces, ASTM—61, 281TN
Infrared Spectroscopy, Stewart—61, 547R
brightness difference and border distinctness—61, 962
constant-brightness surfaces—61, 1152
luminosity and color rendering of white light—61, 1155
fields in luminance and radiance meters—61, 1556A

Plasmas

errors of spectral-line intensities—61, 1330
self-focusing in laser-produced plasmas—61, 1558A
free-electron density of jet-controlled arc—61, 1588A

Polarization

in ir grating instruments—61, 273L
Optics, Klein—61, 277R
yttrium orthovanadate for polarizers—61, 684A
pressure variation of rotatory power of quartz—61, 770
depolarization by frog rods—61, 1187
transition radiation of evaporated C foil—61, 1321
propagation through cholesteric liquid crystals—61, 1363

atmospheric

size distribution of spherical polydispersions—61, 671A

interference

single-wavelength thin-film polarizers—61, 1604

methods

analysis of elliptical polarization—61, 324
thickness and optical constants of films—61, 351
multiple-angle-of-incidence ellipsometry—61, 457
Optical Microscopy of Metals, Gifkins—61, 642R
direct phase-sensing interferometer—61, 655A
Vectograph technique for optical processing—61, 662A
new ellipsometric method for thin films—61, 665A
thin-film polarizer for the infrared—61, 665A
simple multiple-pass birefringent filter—61, 767
Jones calculus in ellipsometry—61, 600. 773
infrared, by reflection from silicon—61, 832L
ellipsometry, error correction, alignment—61, 1077
ellipsometry with imperfect components—61, 1380
Vernier optometer—61, 1585A
complex polarization-variable description—61, 1585A

scattering

polarized-modulation Brillouin spectroscopy—61, 1424L

theory

biaxial crystal optics—61, 49
handedness of polarization after reflection—61, 212
generalized principal angle of incidence—61, 274L
States, Waves and Photons, Simmons, Guttmann—61, 422R
far-field pattern of corner reflectors—61, 431
anomalous behavior of thin-wire gratings—61, 450
self-focusing of elliptically polarized beams—61, 670A
boundary proximity in liquid-crystal films—61, 679A
Pauli operators in polarization optics—61, 1207
characteristic modes in birefringent media—61, 1373
far-field diffraction by semi-infinite plane—61, 1487

Praseodymium

new energy levels of triply ionized Pr—61, 727
spectra of Zr- and Di-activated phosphors—61, 1118L

Quartz

measurement of refractive index—61, 595
transmittance of fused silica waveguides—61, 678A
pressure variation of rotatory power of quartz—61, 770

Radiation

field of a uniformly noving charged particle—61, 52
handedness of polarization after reflection—61, 212
wave propagation in stratified media—61, 308
generation of light from free electrons—61, 423E
superradiance, neighboring atomic dipoles—61, 1561A

Radiometer

fields in luminance and radiance meters—61, 1556A

Radiometry

Optics, Klein—61, 277R
slope and curvature of wind-disturbed water—61, 852
... Isoperibol Laser Calorimetry, West—61, 984R
Hg radiation in low-pressure discharge—61, 1451
international comparison of radiometers—61, 1555A
spectral radiance of pulsed-xenon short arcs—61, 1556A

Raman effect

absolute cross-section measurement, liquids—61, 347
backscattering of anti-Stokes Raman radiation—61, 668A
relaxation oscillations in Raman scattering—61, 668A
high-resolution Raman spectroscopy of gases—61, 997L
Raman scattering with thermal trapping—61, 1565A
Raman scattering in liquids—61, 1574A
optical phonons in iron garnets—61, 1613
Laser Raman Spectroscopy, Tobin—61, 1719R

Ray tracing

spline representation of aspheric surfaces—61, 661A
analysis of multiple-hologram elements—61, 667A
ray trajectories in earth's atmosphere—61, 671A
polychromic program for analysis of systems—61, 684A
transfer function from spread function—61, 684A
generalized ray tracing—61, 685A
generalized grating ray-trace equations—61, 685A
analytic solution of skew rays in GRIN rods—61, 685A
distortion by Fresnel and conventional prisma—61, 686A
ray-trace equations for conic surfaces—61, 1121L
Lens Aberration Data, Palmer—61, 1123R
theoretical eye model with aspherics—61, 1522
sine-wave paths in gradient-index media—61, 1715A

Recognition

probability weighting of spatial filters—61, 478
recognition and synthesis of subpatterns—61, 663A

Reflectance

materials

diffuse transmittance of glass—61, 60
optical constants of silver and gold—61, 128L
Amorphous and Liquid Semiconductors—61, 134R
optical properties of evaporated Rh films—61, 360
effect of atmosphere on ir reflectance—61, 664A
reflectance of Re and W films in vuv—61, 665A
Ge–Se–As glass and hot-pressed CdS—61, 682A
reflectance of CdS and ZnO single crystals—61, 683A

reflectance of bombarded polished metals—61, 693A
optical constants of water in infrared—61, 895
optical constants of silver—61, 1264L
thickness and refractive indices of films—61, 1392
sulfate and phosphate in water—61, 1557A

measurement
phase-change correction of film thickness—61, 131L
thickness and optical constants of films—61, 351
reflectance ratio by ellipsometry—61, 600, 773
total scattered light from thin-film coatings—61, 665A
measuring reflectance and transmittance—61, 681A
properties of ir-transmitting materials—61, 681A
side-viewing detector for reflectometer—61, 1556A

theory
generalized principal angle of incidence—61, 274L
reflectance and optical constants of silver—61, 679A
energy-band structure of gold—61, 680A
lateral-wave theory of total reflection—61, 1580A
modified Kramers–Kronig analysis—61, 1651

Reflection
John Pecham and...Optics, Lindberg, Ed.—61, 278R
Appearance of Metallic Surfaces, ASTM—61, 281TN
far-field pattern of corner reflectors—61, 431
displacement of beam at dielectric interface—61, 586
how can light be trapped?—61, 600T
film-thickness monitor—61, 665A
coronagraph mirrors for near ir—61, 665A
displacement at multilayered structures—61, 667A/1397
distributed coupling in planar waveguides—61, 676A
silicon polarizer for infrared—61, 832L
from surface of ocean—61, 852
Electromagntics of the Sea, AGARD—691, 985R
infrared mirror-scatter measurements—61, 1225
reflection by nonabsorbing isotropic film—61, 1630
total reflection of matter waves—61, 1640

Refraction
index change by heating—61, 12
...Light from Descartes to Newton, Sabra—61, 133R
inhomogeneous toroidal open resonators—61, 1443

Refractive index
distance dependence of phase structure function—61, 488
propagation of 10.6-μm laser beams—61, 674A
laser-propagation averaging times—61, 675A
aberrations of inhomogeneous lenses—61, 777, 1495
lens design with continuously varying indices—61, 886
inhomogeneous lenses, aberrations—61, 1086
structure parameter—61, 1552A/1646

methods
ellipsometric liquid-immersion methods—61, 124L
holographic recording with photopolymers—61, 281E
thickness and optical constants of films—61, 351
measurement, transparent solids and fluids—61, 595
film-substrate problem in ellipsometry—61, 664A/1230
light propagation in a nonlinear medium—61, 668A
fringe spectra and refractive index—61, 679A
properties of ir-transmitting materials—61, 681A
refractive index of microscopic objects—61, 692A
thickness and refractive indices of films—61, 1392
multiple-angle ellipsometry—61, 1622

of materials
dispersion of carbon dioxide—61, 89
optical constants of silver and gold—61, 128L
optical guided-wave focusing and diffraction—61, 154
hardened dichromated-gelatin films—61, 199
ir refractive indices of alkali halides—61, 275L
optical properties of aggregated Ag films—61, 62, 463
(011) *W* optical constants in visible region—61, 470
elasto-optic effect in absorbing materials—61, 608
electro-optic materials—61, 666A
ion-bombarded quartz for integrated optics—61. 678A
transmittance of fused silica waveguides—61, 678A
reflectance and optical constants of silver—61, 679A
energy-band structure of gold—61, 680A
Ge–Se–As glass and hot-pressed CdS—61, 682A
effect of temperature on index of glass—61, 682A
analytic solution of skew rays in GRIN rods—61, 685A
optical properties of Cs—61, 740
scattering from inhomogeneous lenses—61, 876
optical constants of water in infrared—61, 895
properties of amorphous Ge films—61, 1065
transition radiation of evaporated C foil—61, 1321
propagation in radially nonuniform media—61, 1492

Refractometry
refractive index of microscopic objects—61, 692A

Resolution
propagation of structural information—61, 15
holographic recording with photopolymers—61, 281E
half-wave filter on portion of perfect lens—61, 297
superresolution by holography—61, 418L
optical techniques in micro-electronics—61, 648A
high-resolution portable holocamera—61, 649A
high-resolution imagery with Fresnel optics—61, 686A
partially coherent illumination and resolution—61. 687A
superresolving pupil functions—61, 688A
diffraction—limited imaging—61, 789
resolution in partially coherent illumination—61, 870
corrections to electroreflectance line width—61, 980L
superresolution of red-blood-cell holograms—61, 991
new technique for holographic multiplexing—61, 1240

Resonant modes
modes in gaussian optical systems—61, 446
holographic display of laser modes—61, 648A/1426L
multimode laser operation—61, 650A
CO_2 laser signatures—61, 650A
coupling between two optical fibers—61, 678A
first-order approximation, coupling—61, 751
inhomogeneous toroidal open resonators—61, 1443

Rhenium
reflectance of Re and W films in vuv—61, 665A

Rhodium
optical properties of evaporated Rh films—61, 360

Rubidium
hfs of Rb resonance lines—61, 231
Zeeman effect and revised analysis of Rb II—61, 673A

Satellites
earth radiance and solar irradiance in near uv—61, 672A
spectrophotometer aboard Nimbus IV satellite—61, 692A

Scandium

euv spectra of Sc XIV, Ti XV, V XVI—61, 615

Scattering

particle-size distributions—61, 70
from ultrathin free-liquid films—61,76
loss in clad glass fibers and bulk glass—61, 143
vibration analysis using laser speckle—61, 566
Solid State Spectroscopy, Frisch, Ed.—61, 643R
scattering in nematic liquid crystals—61, 678A
liquid-crystal viewing screen—61, 678A
from a rotating ground glass—61, 691A/1301
refractive index of microscopic objects—61, 692A
speckle removal by slowly moving diffuser—61, 847
slope and curvature of wind-disturbed water—61, 852
from inhomogeneous lenses—61, 876
Electromagnetics of the Sea, AGARD—61, 985R
infrared mirror-scatter measurements—61, 1225
coherent scattering in ellipsometry—61, 1236
aircraft data on water turbidity—61, 1578A
particle-size determination—61, 1579A
Mie scattering by spherical particles—61, 1579A
diffusing screens for small-angle scattering—61, 1581A
characteristics of surface diffusers—61, 1589A
surface-height power spectral density—61, 1589A

atmospheric

angular scattering of 10.6-μm radiation by fog—61. 671A
attenuation of solar radiation by clouds—61, 673A
size distribution of spherical polydispersions—61, 671A
measurement of optical scattering by aerosols—61, 671A
coronagraph contamination experiment—61, 694A
beam propagation in a random medium—61, 1044
shadow of contrail on haze—61, 1132, 1595
. . . *Meteorological Optics*, Tricker—61, 1270R
multiple scattering in optically thick clouds—61, 1293
light scattering by aerosols—61, 1549A

Brillouin

scattering by acoustic field—61, 1007
polarized-modulation Brillouin spectroscopy—61, 1424L
stimulated Brillouin scattering and damage—61, 1551A
scattering from rare-gas crystals—61, 1582A
and Rayleigh line widths and shapes—61, 1587A

Raman

cross-section measurement, liquids—61, 347
backscattering of anti-Stokes Raman radiation—61, 668A
relaxation oscillations in Raman scattering—61, 668A
superdamped coupled excitations in GaP—61, 679A
high-resolution Raman spectroscopy of gases—61, 977L
Fabry–Perot Raman interferograms of gases—61, 1246
scattering with thermal trapping—61, 1565A
scattering in liquids—61, 1574A

theory

numerical analysis of diffraction gratings—61, 43
Moliere approximation for wave propagation—61, 797
statistical properties of optical fields—61, 1307
far-field diffraction by semi-infinite plane—61, 1487
reflection by nonabsorbing isotropic film—61, 1630

Scintillation

solar scintillation measurements—61, 242
laser-beam amplitude fluctuations—61, 641L
multiwavelength propagation experiments—61, 674A
irradiance fluctuations in turbulent air—61 675A
scintillation in maritime environment—61, 1064A
spherical wave propagating through turbulence—61, 1285

Selenium

fluoresecnce of mixed CdS_xSe_{1-x} crystals—61, 678A

Silicon

boron-like spectra: Mg VIII, Al IX, Si X—61, 504
measurements of radiative lifetimes in Si II–IV—61, 653A
reflection polarizer for infrared—61, 832L
epitaxial-layer-thickness measurement—61, 1583A

Silver

optical constants of silver and gold in uv—61, 128L
optical properties of aggregated Ag films—61, 62, 463
elasto-optic effect in absorbing materials—61, 608
reflectance and optical constants of silver—61, 679A
optical constants of silver—61, 1264L

Sodium

term splittings for sodium-like ions—61, 335
sodium-vapor density at very low pressures—61, 1251

Sources

neutral-reference-beam shear interferometer—61, 172
generation of light from free electrons—61, 423E
mean lives of excited levels in O I–O VI—61, 519
radiative lifetimes of N II using beams on He—61, 619
x-ray studies with beam-foil source—61, 652A
high-intensity hollow cathode—61, 1342

infrared

. . . *Far-Infrared Spectroscopy*, Finch *et al.*—61, 277R

spectral distribution

high-resolution observations of He II, 3204 Å—61, 123L
low-energy foil-excited Ne spectra—61, 129L
hfs in 3067-Å line of ^{207}Bi—61, 218
hfs of Rb resonance lines—61, 231
laser excitation, blackbody standard—61, 347
window corrections in spectroradiometry—61, 416L
boron-like spectra: Mg VIII, Al IX, Si X—61, 504
assignments and mean lives for O II, O III—61, 515
absorption spectra of uranium—61, 672A/1538L
organic-dye-laser spectrometer—61, 680A
wide-lorentzian-width Ar II, Ne II lines—61, 833L
beam-foil studies of nitrogen—61, 947
radiative lifetime of $A^1\Pi$ state of CO—61, 952
beam-foil-excited Ar spectrum, 500–1000 Å—61, 978L
Hg resonance in low-pressure discharge—61, 1451
spectral radiance of pulsed-xenon short arcs—61, 1556A
Balmer-α excitation by electron impact—61, 1587A
free-electron density of jet-controlled arc—61, 1588A
Beam-Foil Spectroscopy, Martinson *et al.*, Eds.—61, 1719R

theory

luminosity and color rendering of white light—61, 1155

ultraviolet

euv spectrum of N IV—61, 625
high-energy vacuum spark in xuv—61, 1011
absorption spectra of highly ionized iron—61, 1591A

Spectra

Guide to Fluorescence Literature, 2, Passwater—61, 642R
new Fabry–Perot method for periodic spectra—61, 1246
Survey of the Universe, Menzel *et al.*—61, 1271R

absorption
optical properties of aggregated Ag films—61, 62, 463
absorption by CO_2 between 1100 and 1835 cm^{-7}—61, 499
absorption spectra of uranium—61, 672A/1538L
collision broadening of CO absorption lines—61, 673A
solutions of lock-in detection problem—61, 1015
infrared and visible, natural garnets—61, 1325
Photophysics of Aromatic Molecules, Birks—61, 1431R

elements
Fe, Co, Ni, Cu isoelectronic with Na I, Mg I—61, 91
first spark spectrum of arsenic—61, 96
first spectra of Cl, Br, I in 4-μm region—61, 110
high-resolution observations of He II, 3204 Å—61, 123L
low-energy foil-excited Ne spectra—61, 129L
oscillator strengths in Kr and Xe—61, 136E
MIT Wavelength Tables, 2nd ed., Harrison, Ed.—61, 136TN
hfs in 3067-Å line of ^{207}Bi—61, 218
photoionization cross section of C I continuum—61, 223
hfs of Rb resonance lines—61, 231
oscillator strengths for Fe III—61, 271L
helium metastable transition probabilities—61, 332
O I and S I ir laser transitions—61, 415L
boron-like spectra: Mg VIII, Al IX, Si X—61, 504
classifications of transitions of Y, Zr, Nb, Mo—61, 508
assignments and mean lives for O II, O III—61, 515
mean lives of excited levels in O I–O VI—61, 519
euv spectra of Sc XIV, Ti XV, V XVI—61, 615
radiative lifetimes of N II using beams on He—61, 619
euv spectrum of N IV—61, 625
transition probabilities, lifetimes in Ar III—61, 641L
transition for *L-S* to *J-j* in lanthanons—61, 672A
new energy levels of triply ionized Pr—61, 727
new energy levels of Mn III—61, 732
wide-lorentzian-width Ar II, Ne II lines—61, 833L
Selected Tables... C I–VI, Moore—61, 838R
absolute oscillator strengths—61, 938
beam-foil studies of nitrogen—61, 947
beam-foil-excited Ar spectrum, 500–1000 Å—61, 978L
new identifications, lifetimes in sulfur—61, 983L
nitrogen afterglow—61, 1092
configurations of lanthanides, actinides—61, 1101
energy differences for lanthanides, actinides—61, 1112
Atomic Spectra, 2nd ed., Kuhn—61, 1123R
accurate ground-term combinations of Ar II—61, 1257
$4p^3$–$4p^25s$ transitions in Nb IX—61, 1264L
transition probabilities for Ar I—61, 1267L
analysis of Nd I and Nd II—61, 1335
Au I, Au II, Au III—61, 1342
resonance lines of La III—61, 1427L
spectra of neutral and singly ionized Ho—61, 1429L
Spectral Analysis of Ba II Star, Tech—61, 1431R
selective depopulation Cs $6^2S_{\frac{1}{2}}(F=3)$ level—61, 1455
oscillator strengths of prominent U lines—61, 1587A
Balmer-α excitation by electron impact—61, 1587A
collision theory, Xe absorption spectrum—61, 1588A
triply ionized lanthanum—61, 1590A
configurations for lanthanides, actinides—61, 1590A
isotope shifts in Dy I and Er I—61, 1590A
cascade decay in atomic transition probability—61, 1656
energy levels of lanthanides, actinides—61, 1666
two spectroscopic systems in lanthanide atoms—61, 1682
energy levels, mean lives of Cl II–Cl VII—61, 1686
one-electron spectrum of Lu III—61, 1693

molecular
calibration of vuv monochromators—61, 83
ir, of rare-earth Sn, Ti pyrochlores—61, 209
line shifts in first overtone of DF—31, 573
intramolecular vibrations of water molecule—61, 673A
high-intensity resonance on CaF_2:H^-—61, 680A
radiative lifetime of $A^1\Pi$ state of CO—61, 952
Spectroscopic Data, Denis-Gausset, Ed.—61, 983R
effect of metastable molecules—61, 1098
tests of theory of molecular hydrogen—61, 1569A
hyperfine structures in molecular iodine—61, 1574A
CF_2 and CF spectra in flowing C_2F_4 afterglow—61, 1574A
stimulated emission in pyrene complexes—61, 1574A
line strengths and half-widths in CO_2—61, 1587A
oscillator strength estimates of NO—61, 1587A
heat-pipe oven—61, 1588A
optical phonons in iron garnets—61, 1613
Rotation–Vibration of Molecules, Amat *et al.*—61, 1718R

sources
enhancement by dye-laser quenching—61, 746
Beam-Foil Spectroscopy, Martinson *et al.*, Eds.—61, 1719R

theory
term splittings in one-electron spectra—61, 335
Symmetry and Atomic Spectroscopy, Wybourne—61, 550R
fringe spectra and refractive index—61, 679A
preliminary level analysis of Dy I and Dy II—61, 704
energy levels for highly ionized atoms—61, 942
configurations $4f^{N-1}6s^26p$, Gd I, Dy I, Er I, Yb I—61, 1350
energy-levels for truncated-core f^Nd—61, 1590A
Zeeman effect of As II—61, 1590A
photoabsorption resonances in lanthanides—61, 1590A

thermal
modified Kramers–Kronig analysis—61, 1651

Spectrograph
Optical Instruments, Techniques, Dickson—61, 548R

Spectrometer
organic-dye-laser spectrometer—61, 680A
spectrometer for astronomical observations—61, 687A
multiplexed interference-filter spectrometer—61, 1560A
holographic spectrometer—61, 1583A
ion-bombarded quartz for integrated optics—61, 678A

Spectrophotometer
polarization in ir grating instruments—61, 273L
Infrared Spectroscopy, Stewart—61, 547R
spectrophotometer aboard Nimbus IV satellite—61, 682A

Spectrophotometry
diffuse transmittance of glass—61, 60
particle-size distributions—61, 70
absolute measurement, Raman cross sections—61, 347
Infrared Spectroscopy, Stewart—61, 547R
Undergraduate Instrumental Analysis, Robinson—61, 548R
earth radiance and solar irradiance in near uv—61, 672A
absorption coefficients of water in ir—61, 673A/1316
corrections for instrumental broadening—61, 835L
theory of derivative spectrometer, II—61, 1269L

Spectroradiometry
window corrections in spectroradiometry—61, 416L
wide-angle, high-resolution scanner—61, 692A

Spectroscopy
Symmetry and Atomic Spectroscopy, Wybourne—61, 550R
collision broadening of CO absorption lines—61, 673A

Spectroscopic Data—Diatomic Molecules—61, 983R
Progress in Optics VIII, Wolf, Ed.—61, 1124R

absorption
saturated absorption spectroscopy—61, 1582A
absorption line parameters—61, 1587A

atmospheric
atmospheric transmittance at low resolution—61, 670A

emission
transition probabilities for Ar I—61, 1267L
errors of spectral-line intensities—61, 1330

Fourier
Optics, Klein—61, 277R
Annual Rev. Astronomy 8, Goldberg, Ed.—61, 421R
Brillouin and Rayleigh line widths and shapes—61, 1587A

instruments and methods
Spectroscopic Astrophysics (Struve) Herbig, Ed.—61, 134R
Far-Infrared Spectroscopy, Finch *et al.*—61, 277R
calibration in euv—61, 495
Undergraduate Instrumental Analysis, Robinson—61, 548R
Solid State Spectroscopy, Frisch, Ed.—61, 643R
x-ray studies with beam-foil source—61, 652A
x rays from beam-foil interactions—61, 652A
cascade effects in lifetime measurements—61, 652A
removal of aperture broadening in fast beam—61, 652A
alignment of ^{7}Li atom by collisions—61, 653A
g values by beam-foil technique—61, 653A
beam-foil spectra of He and O, 200–600 Å—61, 653A
charge-state identification of spectral lines—61, 653A
radiative lifetimes in Si II–IV—61, 653A
spectroscopy of picosecond light pulses—61, 654A
use of computer to acquire spectroscopic data—61, 673A
corrections for instrumental broadening—61, 835L
modulation spectroscopy, electroreflectance—61, 980L
emission-intensity measurements in euv—61, 1011
coherent optical computer for interferograms—61, 1355
Far-Infrared Spectroscopy, Möller, Rothschild—61, 1542R
tunable lasers in molecular spectroscopy—61, 1582A
heat-pipe oven—61, 1588A
Stark effect in CH_3Cl and Q switching—61, 1660
Introd. Molecular Spectroscopy, Herzberg—61, 1718R
Laser Raman Spectroscopy, Tobin—61, 1719R

sources
free-electron density of jet-controlled arc—61, 1588A
Beam-Foil Spectroscopy, Martinson *et al.*, Eds.—61, 1719R

Spread function
polychromic program for analysis of systems—61, 684A
transfer function from spread function—61, 684A
effect of linear smear on photographic images—61, 859
asymptotic expansions for transfer function—61, 1214

Stark effect
in CH_3Cl and its application to Q switching—61, 1660

Sulfur
O I and S I ir laser transitions—61, 415L
new identifications and lifetimes—61, 983L

Sun
solar scintillation measurements—61, 242
prediction of coronal forbidden lines—61, 335
Annual Rev. Astronomy 8, Goldberg, Ed.—61, 421R
shadow of contrail on haze—61, 1132, 1595

Surface guided waves
displacement at multilayered structures—61, 667A/1397
optical guided waves and integrated optics—61, 674A
distributed coupling in planar waveguides—61, 676A
beam displacement and evanescent waves—61, 676A
instrumentation applications of waveguides—61, 677A
prism–thin-film waveguide coupler—61, 677A
cylindrically guided waves—61, 677A
guided-wave propagation at 10.6 μm—61, 677A
ion-bombarded quartz for integrated optics—61, 678A
transmittance of fused silica waveguides—61, 678A
phase shifts of—61, 1035
phase shifts of TE and TM evanescent waves—61, 1423L
optimum excitation by prism–film coupler—61, 1467
amplification via evanescent-wave interactions—61, 1579A

Telescopes
high-precision penta mirror assemblies—61, 655A
image quality in telescopes—61, 661A
tilted-component telescopes—61, 661A
unobstructed-aperture Cassegrain telescopes—61, 661A
Caasegrain-type solid catadioptric objectives—61, 661A
Kitt Peak and Cerro Tololo 4-m telescopes—61, 682A
control of figure of 75-cm deformable mirror—61, 693A
shell-theory deflection of optical mirrors—61, 693A
elastic deformation of lightweight mirrors—61, 693A
methods for determining mirror deformations—61, 693A
Survey of the Universe, Menzel *et al.*—61, 1271R
low-scattering surfaces for telescopes—61, 1550A
$f/3$ focal reducer for newtonian telescope—61, 1567A
field of view of Ritchey–Chrétien telescopes—61, 1581A
apodizers in partially coherent light—61, 1585A
testing large astronomical mirrors—61, 1586A
euv glancing-incidence telescopes—61, 1586A

Thallium
Tl-doped KCl disks, uv fluorescence standards—61, 1422L

Titanium
euv spectra of Sc XIV, Ti XV, V XVI—61, 615

Transmittance

atmospheric
atmospheric transmittance at low resolution—61, 670A
propagation of light pulses through clouds—61, 670A
attenuation of solar radiation by clouds—61, 671A
attenuation by fogs between 2.3 and 3.6 μm—61, 672A
multiple scattering in optically thick clouds—61, 1293

materials
diffuse transmittance of glass—61, 60
Ge–Se–As glass and hot-pressed CdS—61, 682A
transmittance of fused silica on irradiation—61, 683A
soft-x-ray-filter transmittance measurements—61, 683A
of light in sea at thermocline—61, 831L

measurement
window corrections in spectroradiometry—61, 416L
transmittance of fused silica waveguides—61, 678A
measuring reflectance and transmittance—61, 681A
properties of ir-transmitting materials—61, 681A

theory
arbitrary aperture-transmittance function—61, 439

Tungsten

(011) optical constants in visible region—61, 470
reflectance of Re and W films in vuv—61, 665A

Turbulence

propagation of mutual coherence—61, 236
optical-pulse propagation in turbulent medium—61, 256
mutual coherence of wave in atmosphere—61, 482
reciprocity of the turbulent atmosphere—61, 492
saturation of fluctuations by turbulence—61, 675A
multiwavelength propagation experiments—61, 674A
seeing from high-altitude jet aircraft—61, 675A
laser beams propagating through turbulence—61, 675A
phase-front deformation of laser beams—61, 675A
irradiance fluctuations in turbulent air—61, 675A
effect of turbulence on detection processes—61, 676A
atmospheric-turbulence profile in troposphere—61, 676A
spherical wave propagating through turbulence—61, 1285
meteorological measurements of turbulence—61, 1552A
degrees of freedom of turbulent atmosphere—61, 1553A
angle-of-arrival studies—61, 1553A
fluctuations of beam in turbulent atmosphere—61, 1553A
turbulent refractive-index field—61, 1553A

Ultraviolet

vuv laser emission—61, 659A

absorption
uv absorption of gold colloids—61, 680A

detection
holographic recording with photopolymers—61, 281E
paraterphenyl as detector in euv—61, 1011
ultraviolet-sensitive fire detector—61, 1556A

optical properties
optical constants of silver and gold—61, 128L
optical properties of evaporated Rh films—61, 360
reflectance of Re and W films in vuv—61, 665A
electro-optic effect in $BaTiO_3$—61, 679A

optics
calibration of monochromators—61, 83
efficient Kerr cell for use in uv—61, 131L
glancing-incidence nested x-ray telescopes—61, 662A
multislits with Boltzmann interferometers—61, 835L
euv glancing-incidence telescopes—61, 1586A

spectra
photoionization cross section of C I continuum—61, 223
classification of transitions of Y, Zr, Nb, Mo—61, 508
euv spectrum of N IV—61, 625
new energy levels of Mn III—61, 732
beam-foil-excited Ar spectrum, 500–1000 Å—61, 978L
accurate ground-term combinations of Ar II—61, 1257
Ne II far-vuv wavelengths—61, 1591A

Uranium

absorption spectra of uranium—61, 672A/1538L
oscillator strengths of prominent U lines—61, 1587A

Vanadium

euv spectra of Sc XIV, Ti XV, V XVI—61, 615

Vision

Visual Science Information Center—61, 1273TN
blur as stimulus to human lens accommodation—61, 1577A
evaluation of optical radiation hazards—61, 1577A

binocular
anomalous stereoscopic depth perception—61, 410
processing of binocular disparity—61, 419L
unaided viewing of stereo imagery—61, 667A
depth seen from modulations of disparity—61, 689A

light and color
photochromatic intervals—61, 267
Color Blindness, Cruz-Coke—61, 422R
Sources of Color Science, MacAdam, Ed.—61, 549R
orientation-specific color after effects—61, 689A
new color-matching ellipses—61, 1135
luminosity and color rendering of white light—61, 1155
temporal summation for wavelength changes—61, 1414
color-difference matches—61, 1501
evaluation of lighting—61, 1575A

nerve structure and function
effect of scaling optic-nerve impulses—61, 415L
3-stage model for target detection—61, 689A
dark light of cat retinal ganglion cells—61, 690A
retinal cone as an ideal light collector—61, 1120L
spatial-frequency channels in human vision—61, 1176
depolarization by frog rods—61, 1187
neurophysiology of color vision—61, 1562A
monkey LGN-cell responses—61, 1567A
interactions between visual receptors—61, 1567A

optics of eye
Contact Lens Seminar I, Sampson, Feldman, Eds.—61, 135R
Laser Fundamentals, Van Pelt *et al.*—61, 547R
Eye Injuries, Zagora—61, 837R
Vernier optometer—61, 1539L
magnification for subnormal vision—61, 1574A
optimal magnification in visual microscopy—61, 1575A
conic functions for curvature of human lens—61, 1577A
threshold and correction of astigmatism—61, 1705

perception
lightness and retinex theory—61, 1
luminance–time relation at eccentricities—61, 115
flicker heterochromatic threshold reduction—61, 261
Visual Perception, Cornsweet—61, 276R
John Pecham and Optics, Lindberg, Ed.—61, 278R
brightness perception near sharp contours—61, 530
flicker: uniform fields—61, 537, 632
Optics, Painting & Photography, Pirenne—61, 550R
partially absorbing glasses for night driving—61, 689A
detectability of degraded visual signals—61, 689A
orientational adaptation—61, 689A/1710
holographic model of visual perception—61, 690A
human-vision constraints of ir imaging—61, 691A
communication theory of night vision—61, 691A
visual-perception models—61, 811
adaptation and critical durations—61, 821
comparison of two measures of metacontrast—61, 828
Vision and Highway Safety, Allen—61, 838R
Reading Disorders, Young, Lindsley, Eds.—61, 839R
visual masking following transient adaptation—61, 955
symmetrical bright and dark Mach bands—61, 958
brightness difference and border distinctness—61, 962
minimally distinct border as criterion—61, 966
model for color conversion—61, 971, 1568A

adaptation with opposite time courses—61, 1122L
Progress in Optics VIII, Wolf, Ed.—61, 1124R
subjective patterns in a flickering field—61, 1164
effects of surround on latency in fovea—61, 1169
effect of masking on contrast of gratings—61, 1172
visual latency as function of stimulus onset—61, 1190
pseudoscopic effects of holographic image—61, 1268L
staircase simulations—61, 1429L
retinal and cortical responses to patterns—61, 1514
determinants of increment threshold—61, 1530
multidimensional scaling of visual stimuli—61, 1562A
interaction of color and luminance—61, 1567A
Bezold–Brücke hue shift—61, 1568A
visibility of low spatial frequencies—61, 1576A
spatial uncertainty in visual discrimination—61, 1576A
signal-to-noise threshold for images—61, 1576A
systems analysis of stereoscopic acuities—61, 1577A

Water

In-Water Photography, Mertens—61, 551R
intramolecular vibrations of water molecule—61, 673A
absorption coefficients of water in ir—61, 673A/1316
optical constants in infrared—61, 895
Electromagnetics of the Sea, AGARD—61, 985R
aircraft data on water turbidity—61, 1578A

Waveguides

optical guided-wave focusing and diffraction—61, 154
properties of absorbing and active cylinders—61, 577
uniform asymptotic description of beam modes—61, 1699

Wavelengths

first spark spectrum of arsenic—61, 96
first spectra of Cl, Br, I in 4-μm region—61, 110
MIT Wavelength Tables, 2nd ed., Harrison, Ed.—61, 136TN
pressure–wavelength dependence of He–Ne laser—61, 216
hfs of Rb resonance lines—61, 231
mean lives of excited levels in O I–O VI—61, 519
euv spectra of Sc XIV, Ti XV, V XVI—61, 615
transition probabilities, lifetimes in Ar III—61, 641L
absorption spectra of uranium—61, 672A/1538L
preliminary level analysis of Dy I and Dy II—61, 704
new energy levels of triply ionized Pr—61, 727
new energy levels of Mn III—61, 732
energy levels for highly ionized atoms—61, 942
beam-foil-excited Ar spectrum, 500–1000 Å—61, 978L
stabilization with resonant reflector—61, 1117L
accurate ground-term combinations of Ar II—61, 1257
Ne II far-vuv wavelengths—61, 1591A
energy levels, mean lives of Cl II–Cl VII—61, 1686
one-electron spectrum of Lu III—61, 1693

X rays

Annual Rev. Astronomy 8, Goldberg, Ed.—61, 421R
Undergraduate Instrumental Analysis, Robinson—61, 548R
x-ray studies with beam-foil source—61, 652A
x rays from beam-foil interactions—61, 652A
glancing-incidence nested x-ray telescopes—61, 662A
soft-x-ray-filter transmittance measurements—61, 638A
electric field at image of optical system—61, 694A
x-ray image formation—61, 1573A

Xenon

frequency shift of Xe 3.5-μm line—61, 673A
collision theory, Xe absorption spectrum—61, 1588A

Ytterbium

classification of transitions in euv spectra—61, 508
$4f^{N-1}6s^26p$, Gd I, Dy I, Er I, Yb I—61, 1350

Zeeman effect

Zeeman effect and revised analysis of Rb II—61, 673A
preliminary level analysis of Dy I and Dy II—61, 704
sodium-vapor density at very low pressures—61, 1251
spectra of neutral and singly ionized Ho—61, 1429L
Zeeman effect of As II—61, 1590A

Zirconium

classification of transitions in euv spectra—61, 508
spectra of Zr- and Di-activated phosphors—61, 1118L

Zone plates

broad-band holographic reconstruction—61, 668A
